

Maps and the Environment

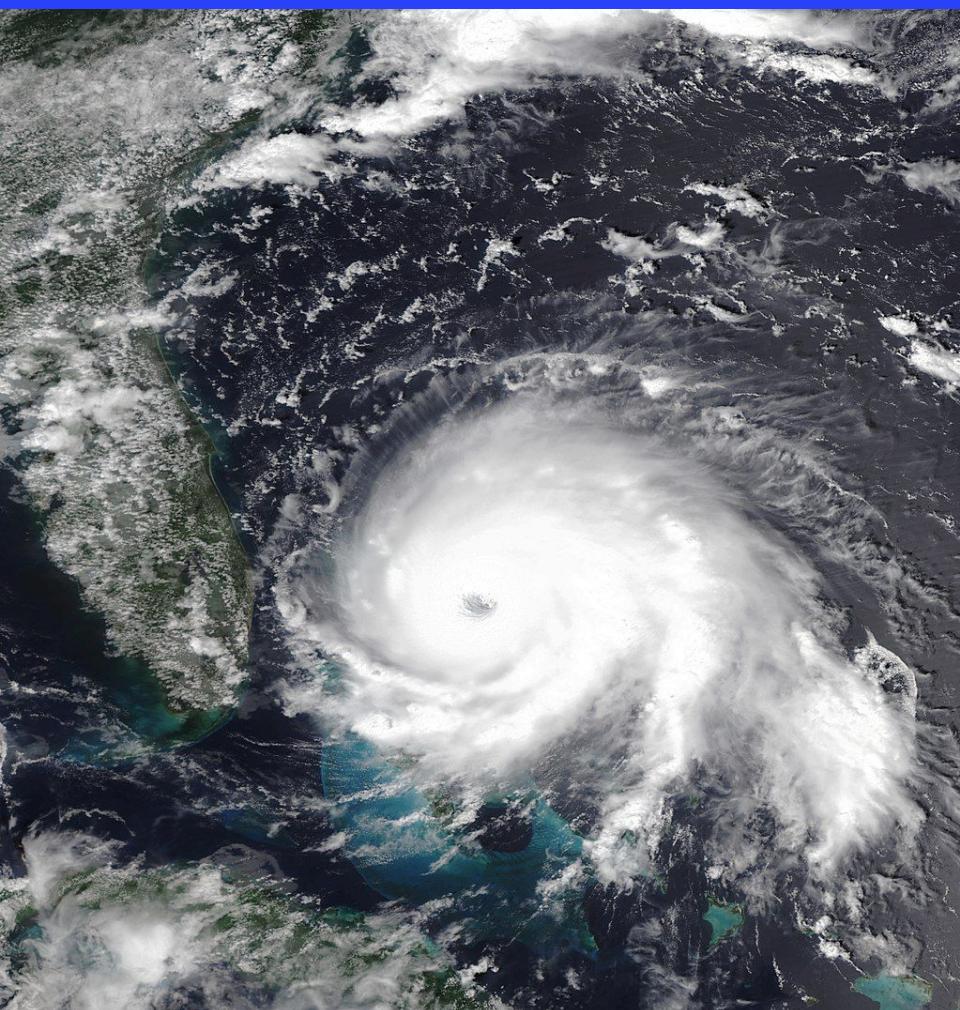

Mapping, Emissions and The Future

Anne Currie & Paul Johnston
Art by JDHancock.com

Hurricane Dorian

- 185mph winds
- =1st Strongest Atlantic Storm
- 70,000 left homeless (Bah.)
- 60+ dead, 400+ missing
- \$8+ Billion damage

Photo and data: https://en.wikipedia.org/wiki/Hurricane_Dorian

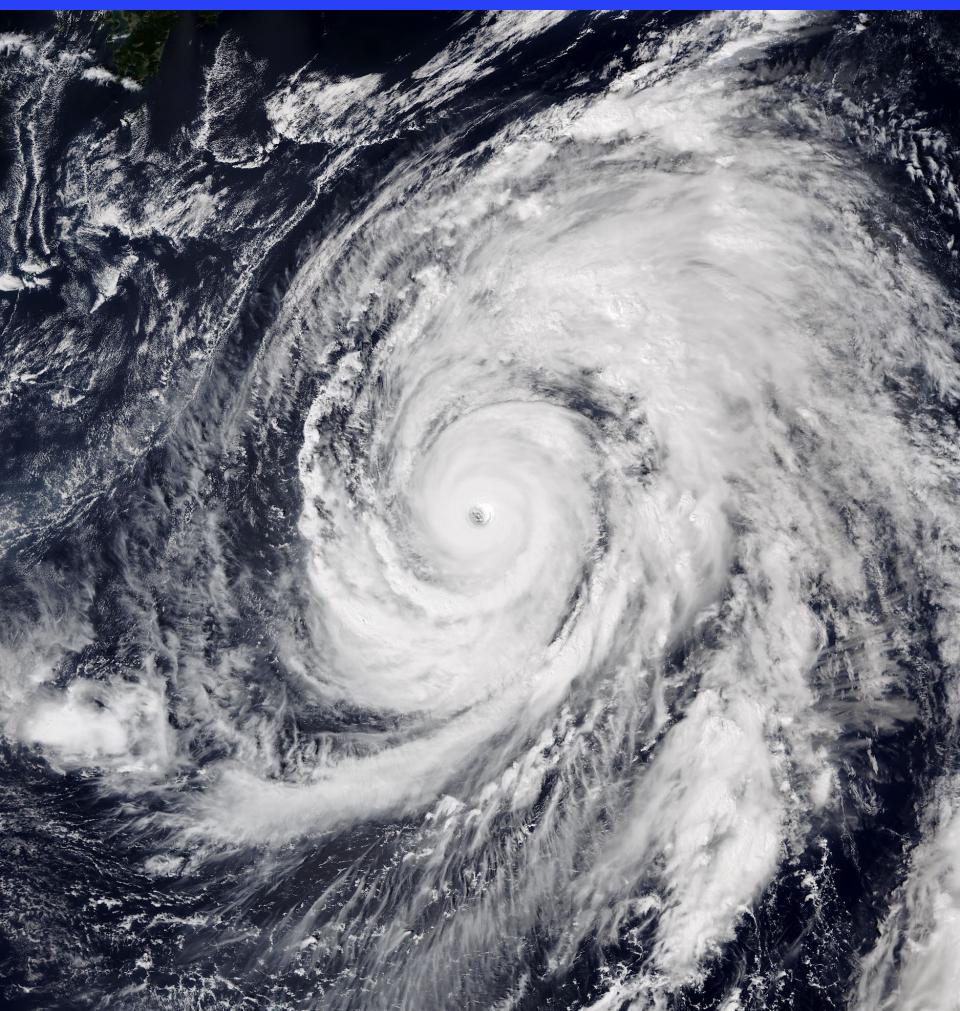

Typhoon Hagibis

- 140mph winds
- Worst storm in *60 years*
- Almost 1000mm of rain in 24hrs
- 40 dead, 16 missing, 6m affected
- Typhoon “season” lasts longer

Photo: [https://en.wikipedia.org/wiki/Typhoon_Hagibis_\(2019\)](https://en.wikipedia.org/wiki/Typhoon_Hagibis_(2019))

Data: BBC News and Al Jazeera

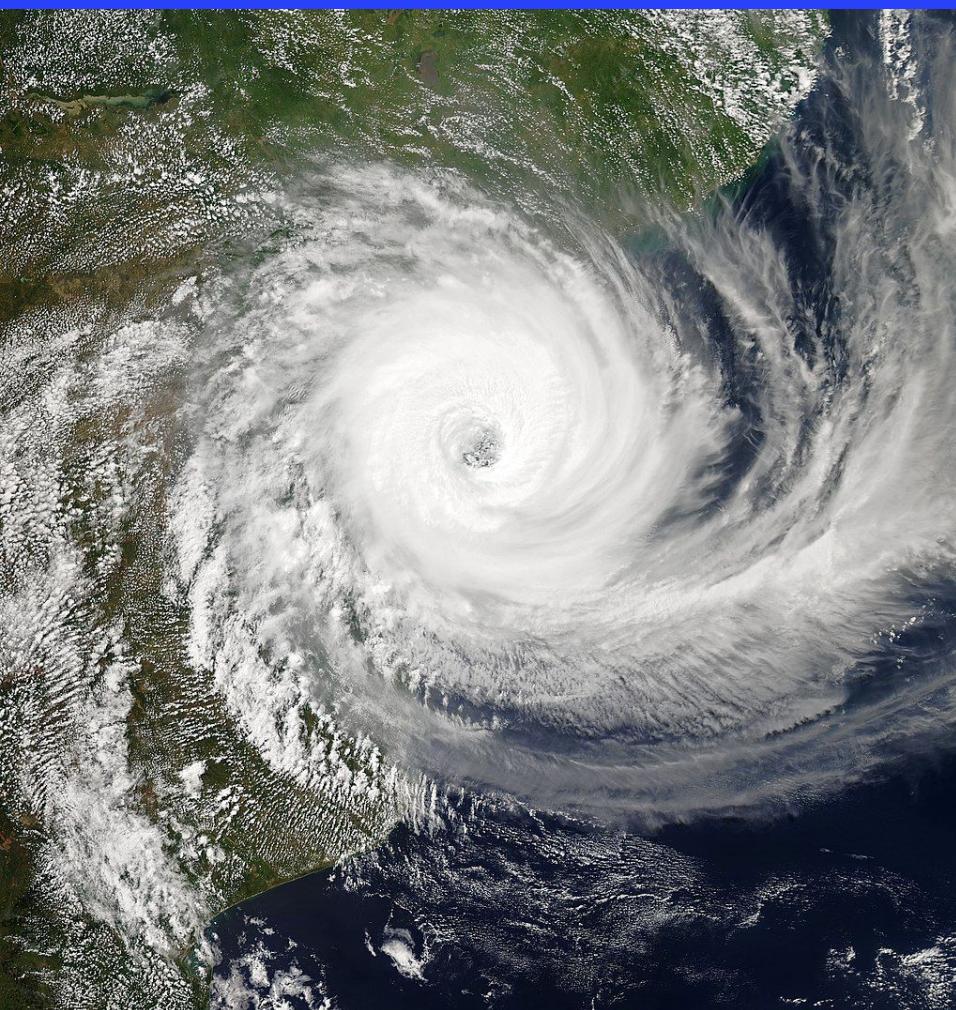

https://twitter.com/Tom_Scott/status/1183408521389445120
<https://www.bbc.co.uk/news/world-asia-50037907>

Cyclone Idai

- Madagascar, Mozambique, Malawi, Zimbabwe
- 125mph winds
- 2nd Deadliest in Indian Ocean
- 1300+ dead, 2000+ missing, 3m affected
- \$2 Billion in damage

Photo and data: https://en.wikipedia.org/wiki/Cyclone_Idai

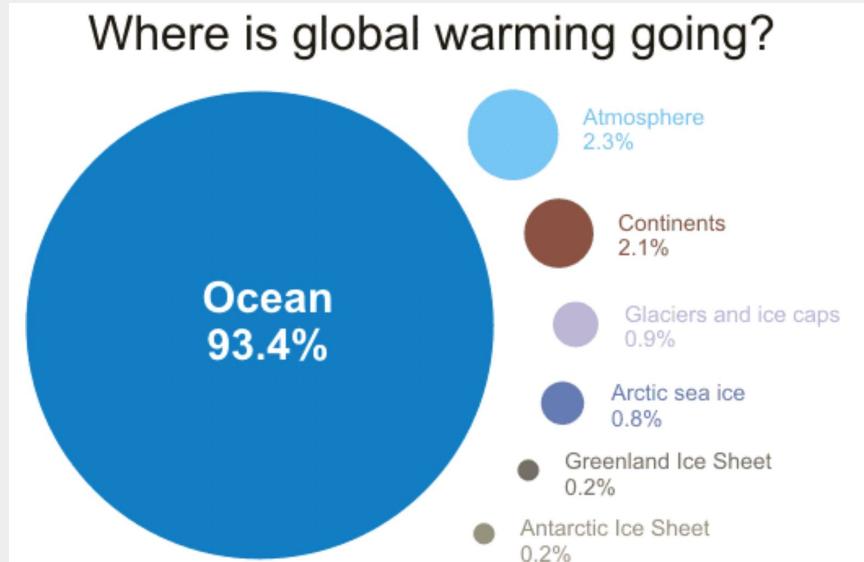

All of these “extreme weather events”
happened in 2019

Climate Change leads to ocean warming which leads to:

- Stronger storms
- Slower storms
- Larger storms
- More rainfall
- Moving more slowly

Note: it doesn't lead to *more* storms

“Extreme Weather” is becoming the
new normal

4C World “Uninsurable” - AXA

<https://www.greenbiz.com/article/axa-4c-warming-makes-world-uninsurable>

AXA: 4C warming makes the world uninsurable

Michael Holder

Monday, December 18, 2017 - 1:40am

Shutterstock / Praiwun Thungsarn

Insurance giant AXA has announced a quadrupling of its 2020 green investment target from \$3.53 billion to \$14.13 billion as the company's CEO warned more than 4 degrees Celsius of warming this century would make the world "uninsurable."

Launched at the One Planet Summit in Paris, Axa unveiled this week a raft of climate policy moves that also will see it further reduce its exposure to fossil fuel assets.

Change is coming

(although what that change will be...?)

Data centres
produce
about as much
greenhouse gas
as aviation

Aviation is bad!

LHR → JFK → LHR

More than 3 tonnes
CO₂ per person

Photo: twitter.com/profraywills/status/1046231254075465728

Cloud is more
efficient!

Jevons Paradox

Efficient Clouds means
more usage

So Cloud must be
powered in a
Sustainable way

Good News: Google and Azure are pretty sustainable (100% offset)

Bad News: AWS are not (50%)

Data centre ethics whitepaper (2018)

<https://bit.ly/2024wp>

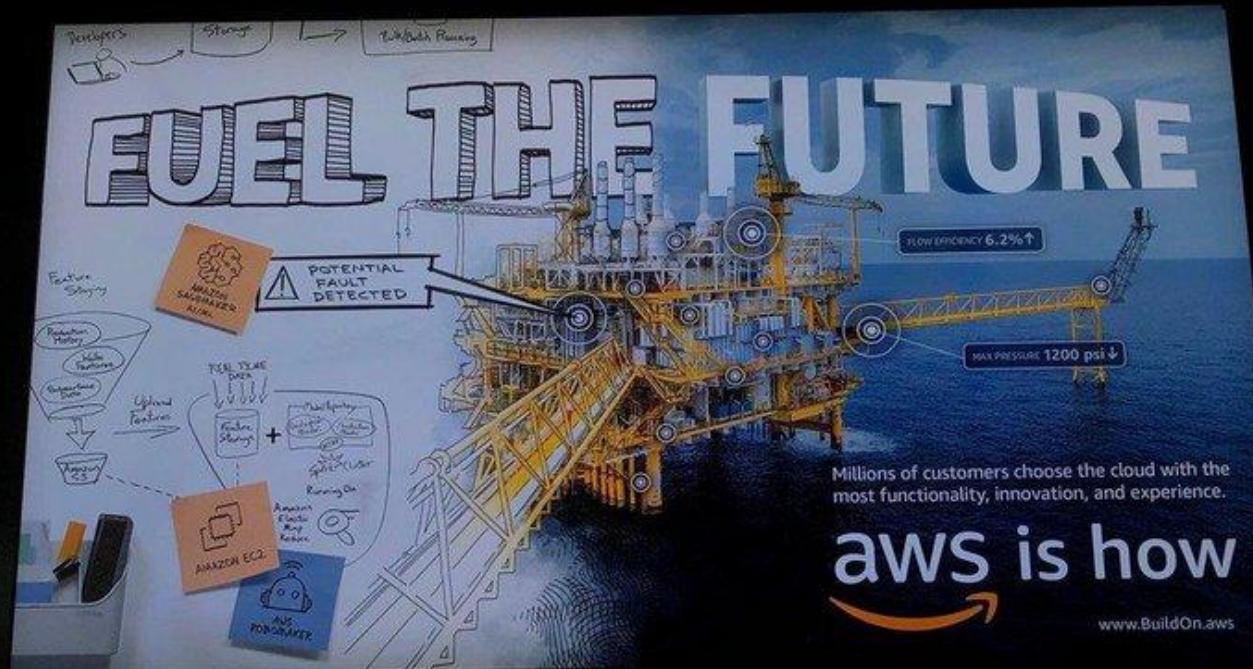

The graphic features the Amazon logo at the top left. To its right is a stylized illustration of a modern industrial facility with conveyor belts, storage units, and small figures. Below this is a circular globe showing various environmental icons like trees, water, and a factory. To the left of the main image, there's a vertical sidebar with a menu icon at the top, followed by ten small blue icons representing different categories or tools.

**THE Paris...
CLIMATE 10 years
PLEDGE Early**

On September 19, 2019, Amazon and Global Optimism announced **The Climate Pledge**, a commitment to meet the Paris Agreement 10 years early. Amazon is the first signatory of this pledge. The Climate Pledge calls on signatories to be net zero carbon across their businesses by 2040—a decade ahead of the Paris Agreement's goal of 2050.

JCDecaux

Greenwash!

Amazon are in the Top 200

emitters of GHG worldwide

So...
What has this
got to do with
mapping?

We have a global “Carbon Budget” and we
have to

REDUCE EMISSIONS BY A LOT

And almost certainly take Carbon out of
the atmosphere too

More “extreme weather” events...

Big companies being “green”...

“Cloud” and Carbon Budgets...

This is all going to
“change the landscape”

Sources of emissions

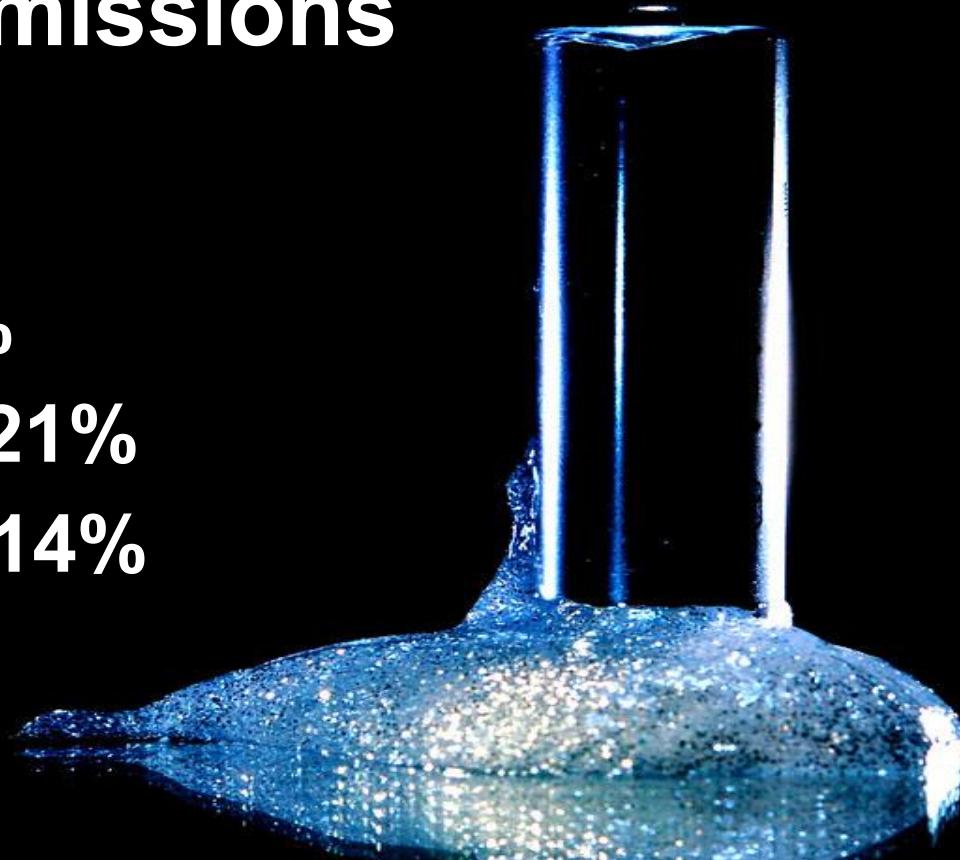

Electricity 25%

Agriculture 24%

Manufacturing 21%

Transportation 14%

Buildings 6%

Sources of emissions

Electricity 25%

Agriculture 24%

Manufacturing 21%

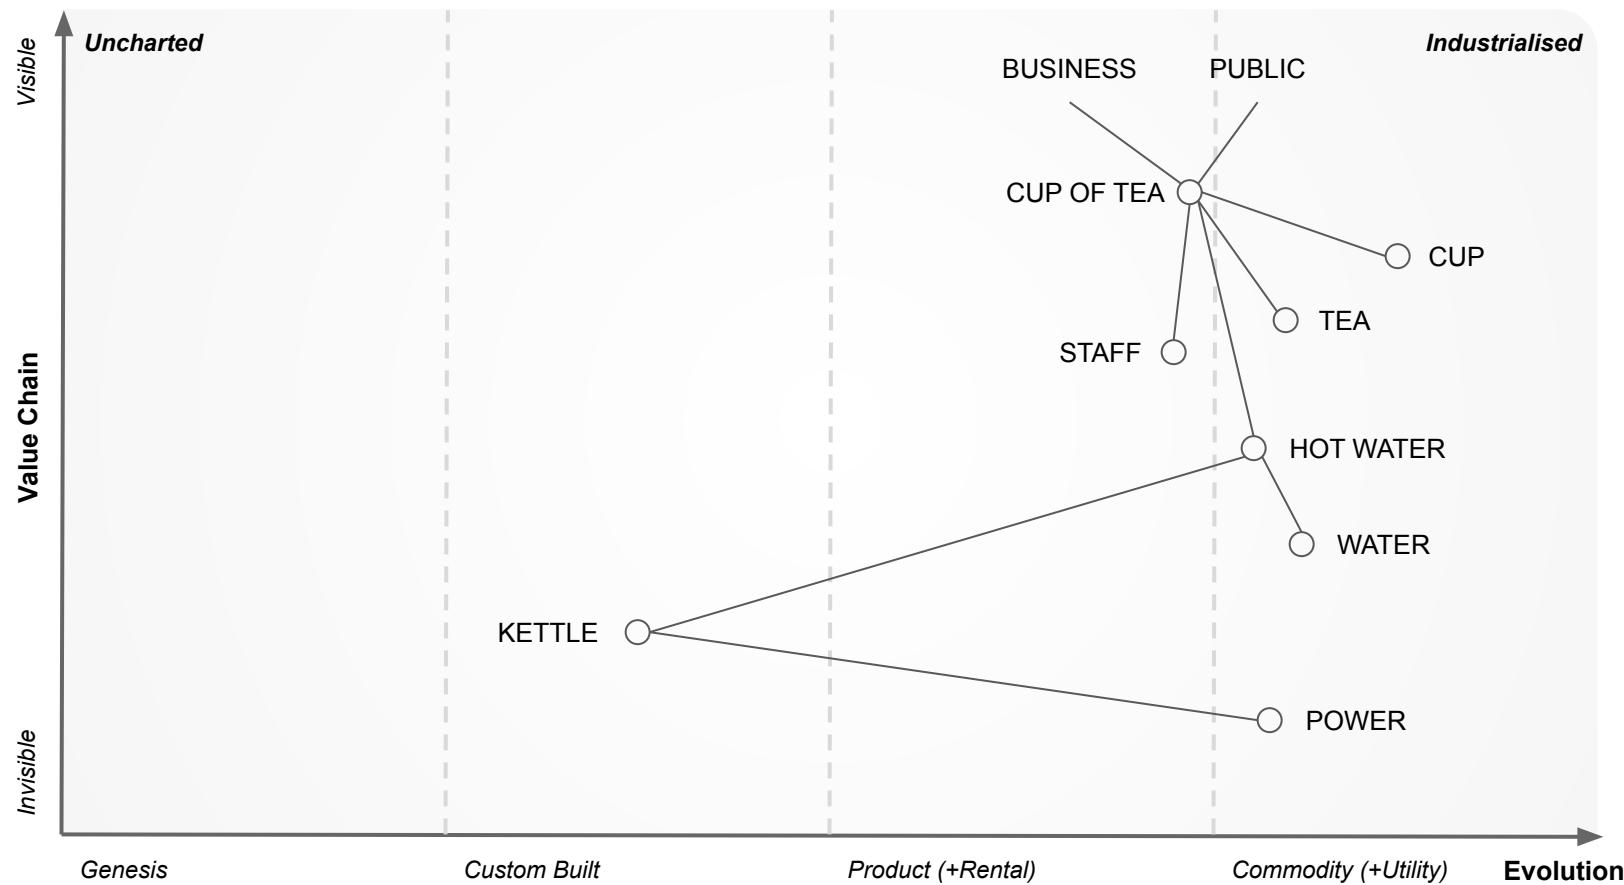

Transportation 14%

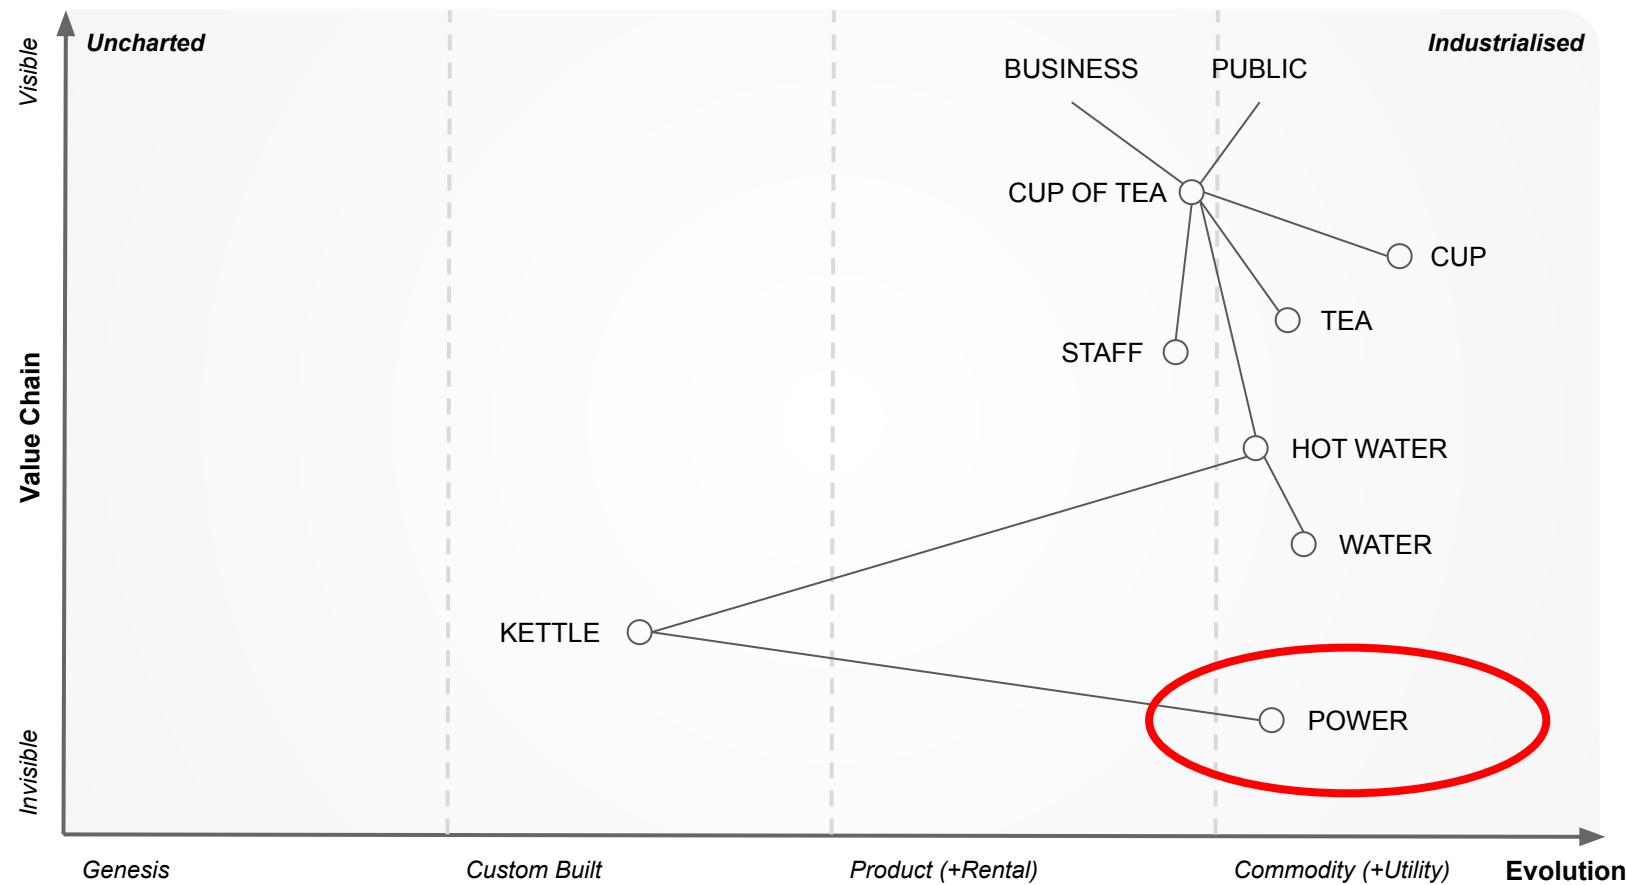

Buildings 6%

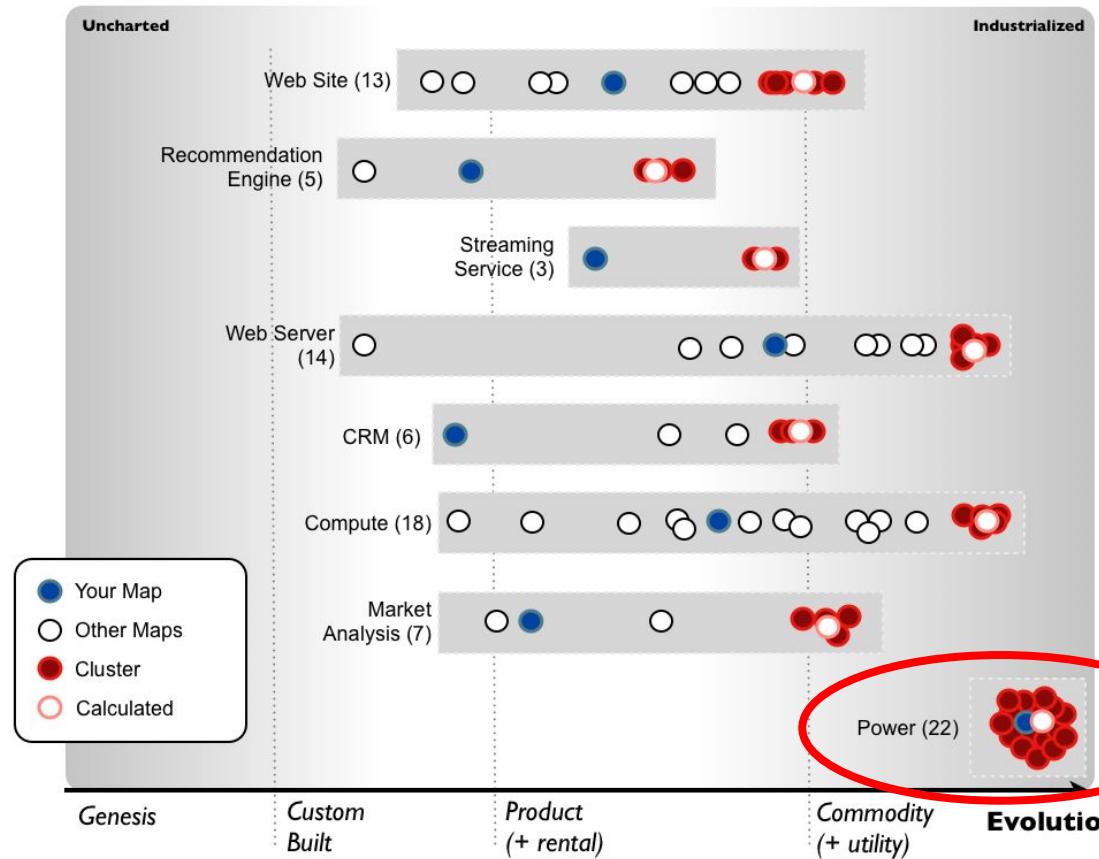

Let's have a nice “Cup of Tea”

and think about this...

Note: Emissions are highly abstracted in a
mature oil-based economy

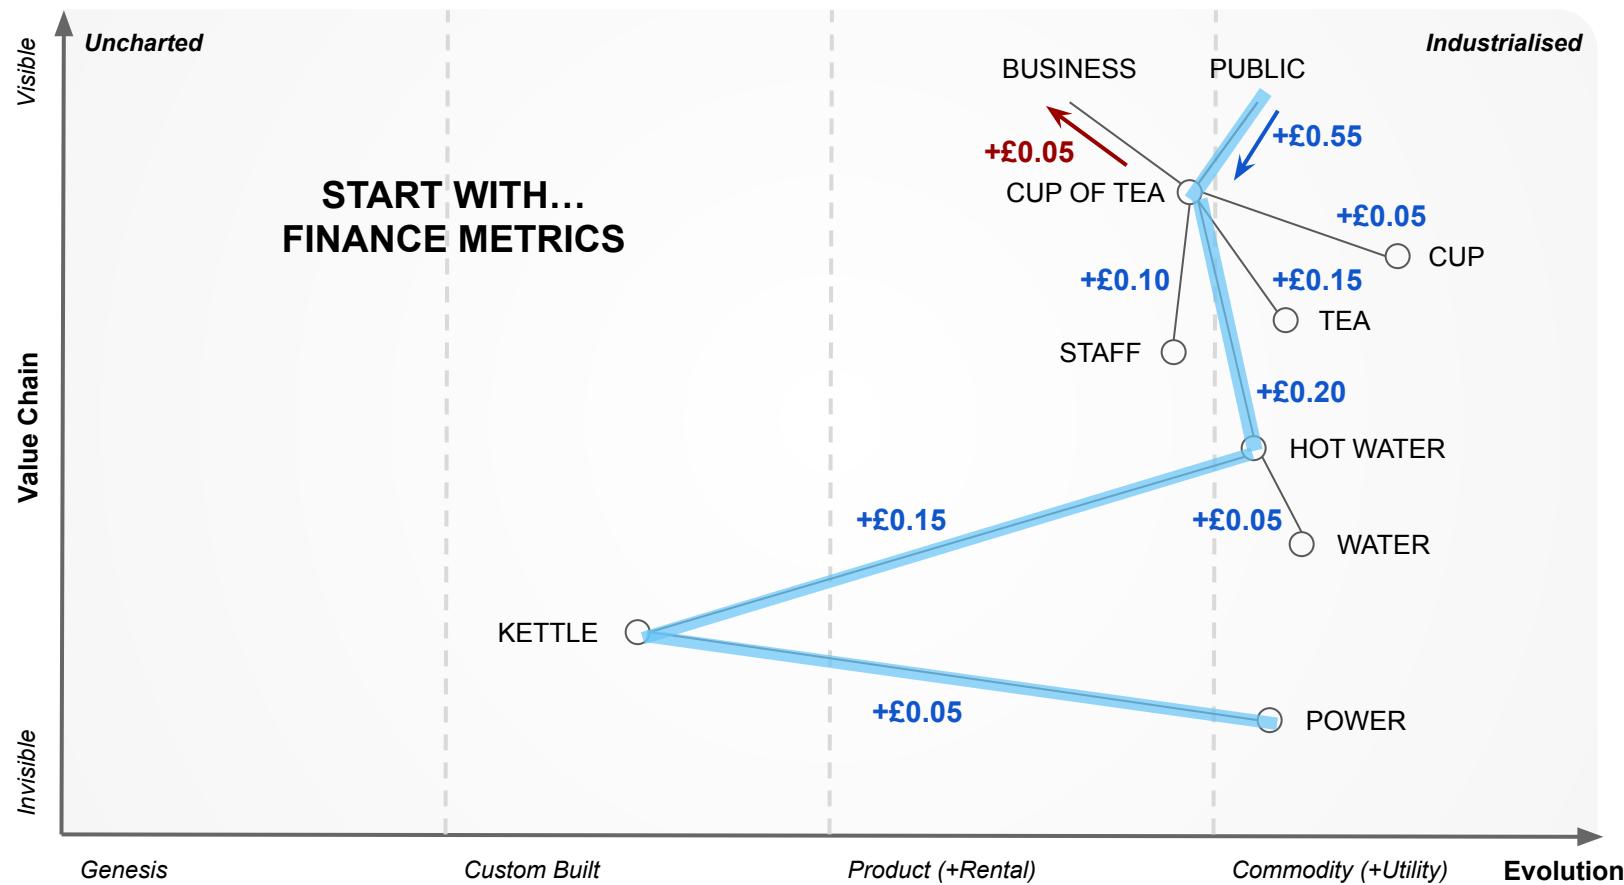

Highly commodified

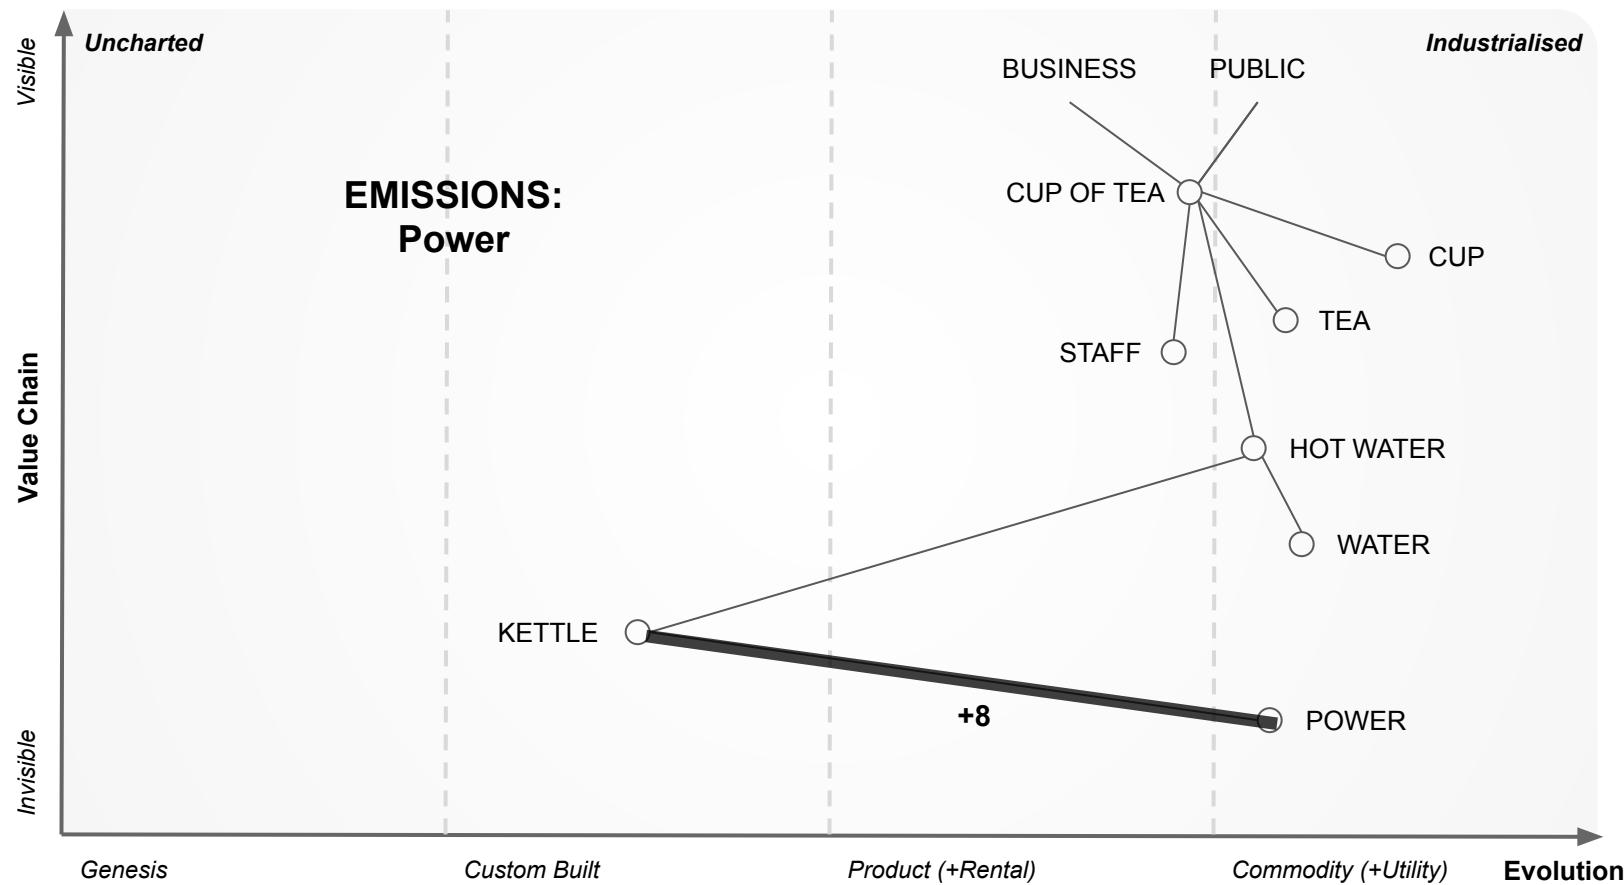

Low perceived value

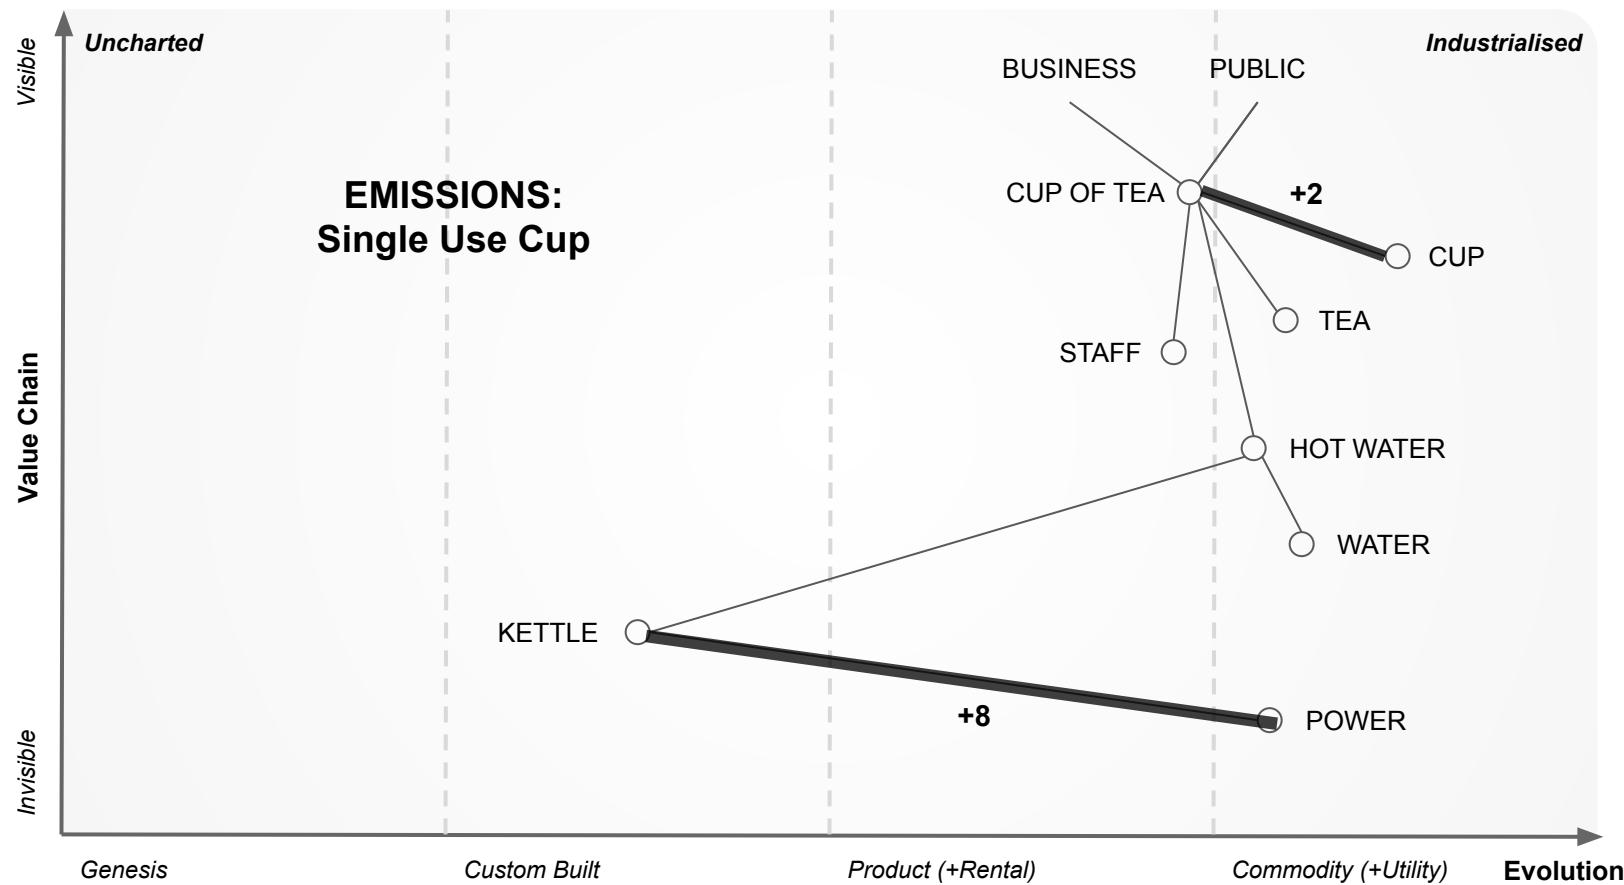

Hard to displace

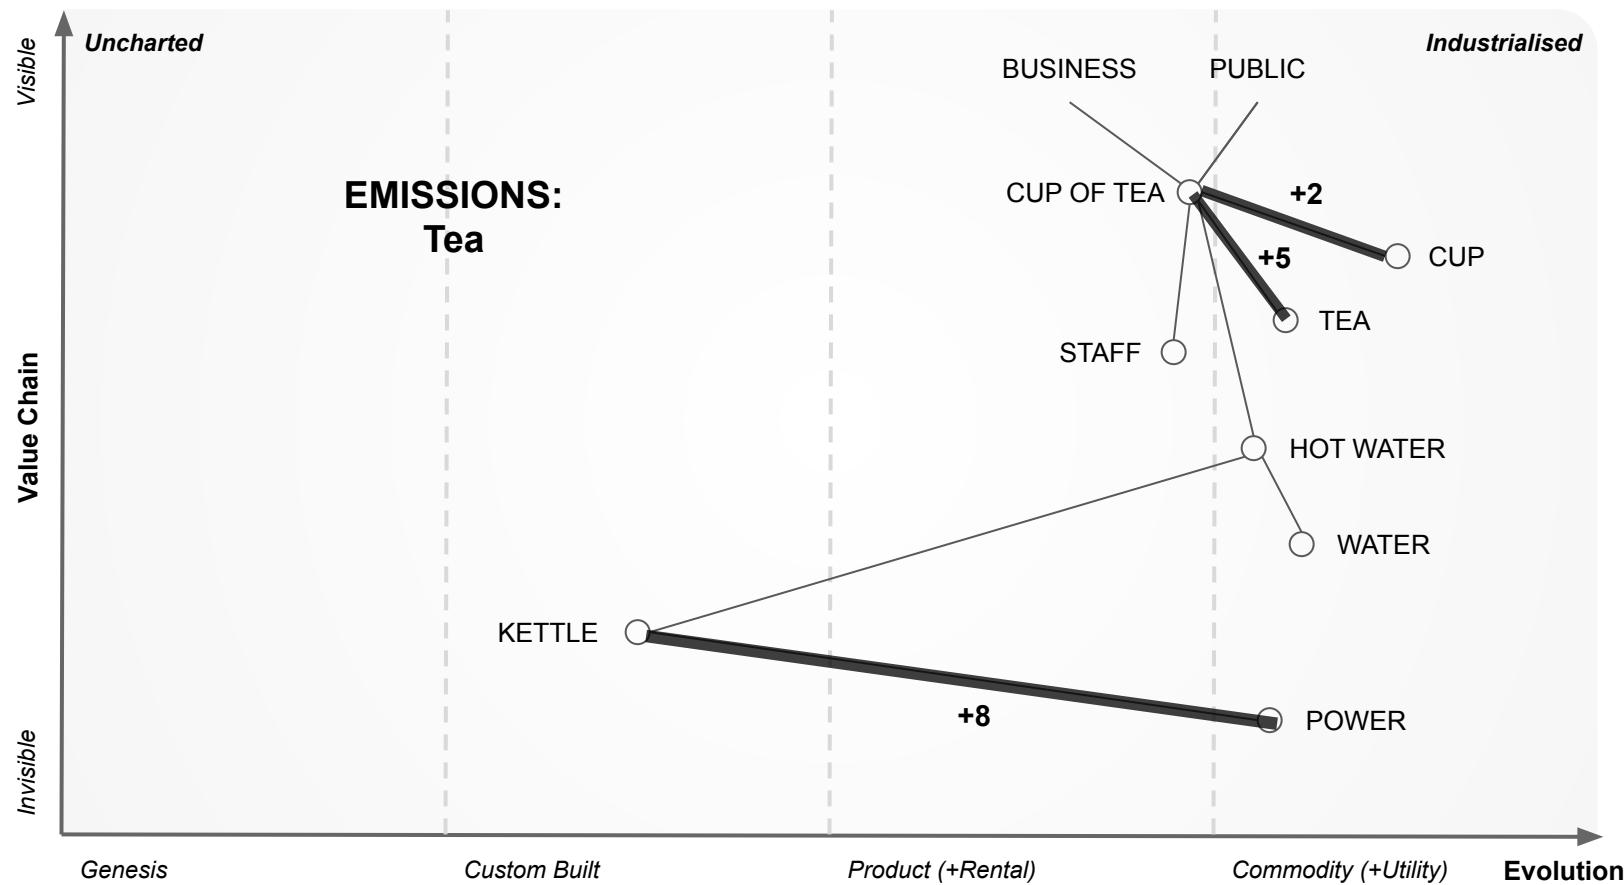

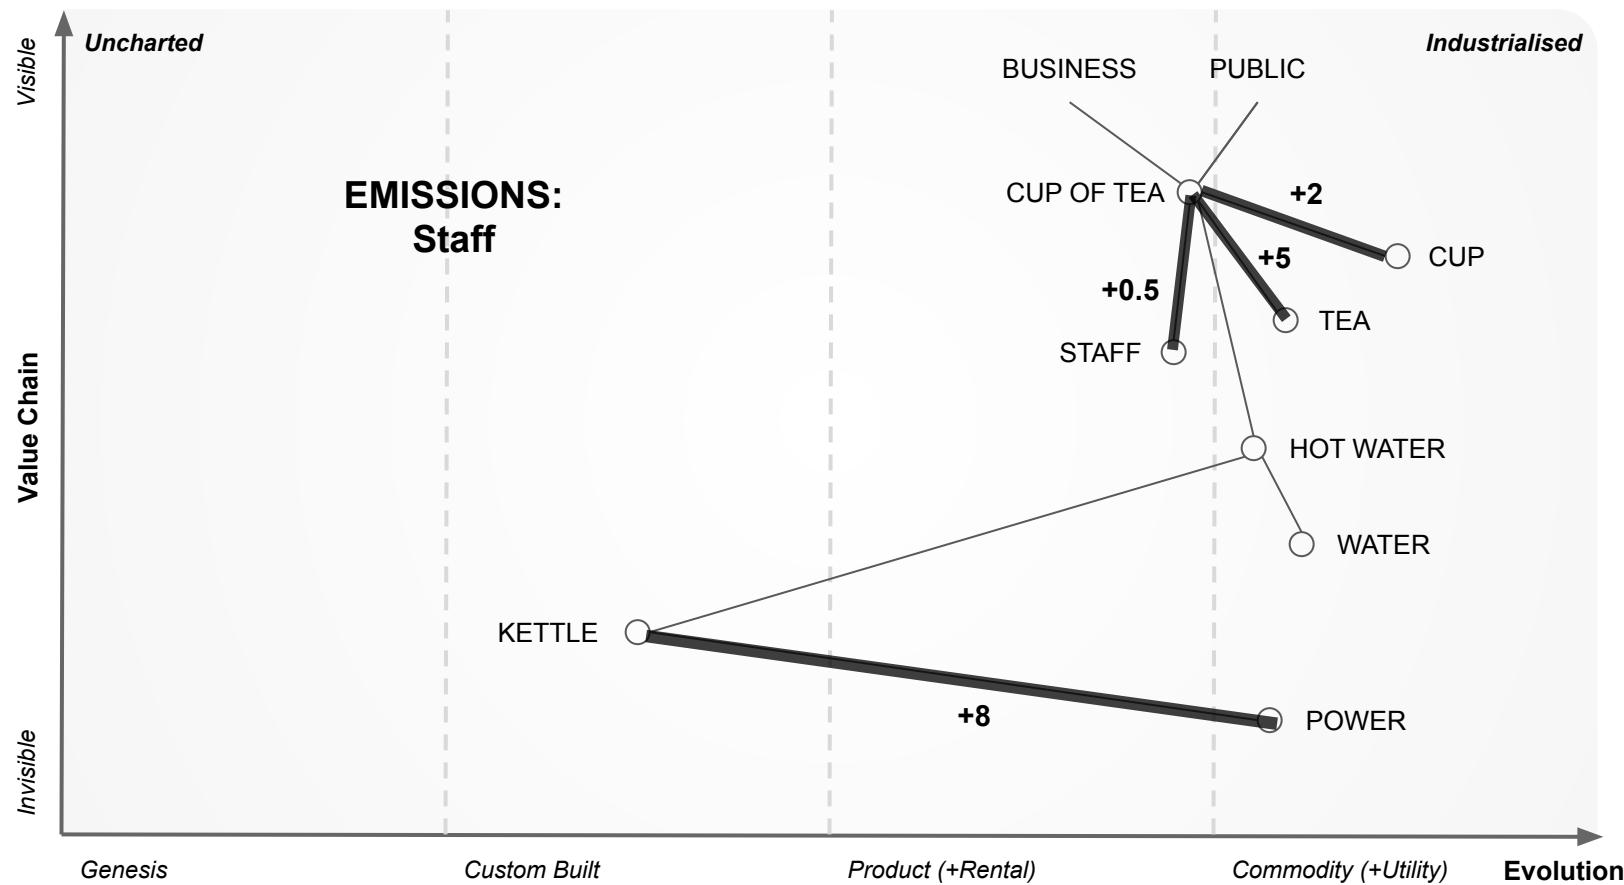

If emissions are “baked in”, can you do
anything about it?

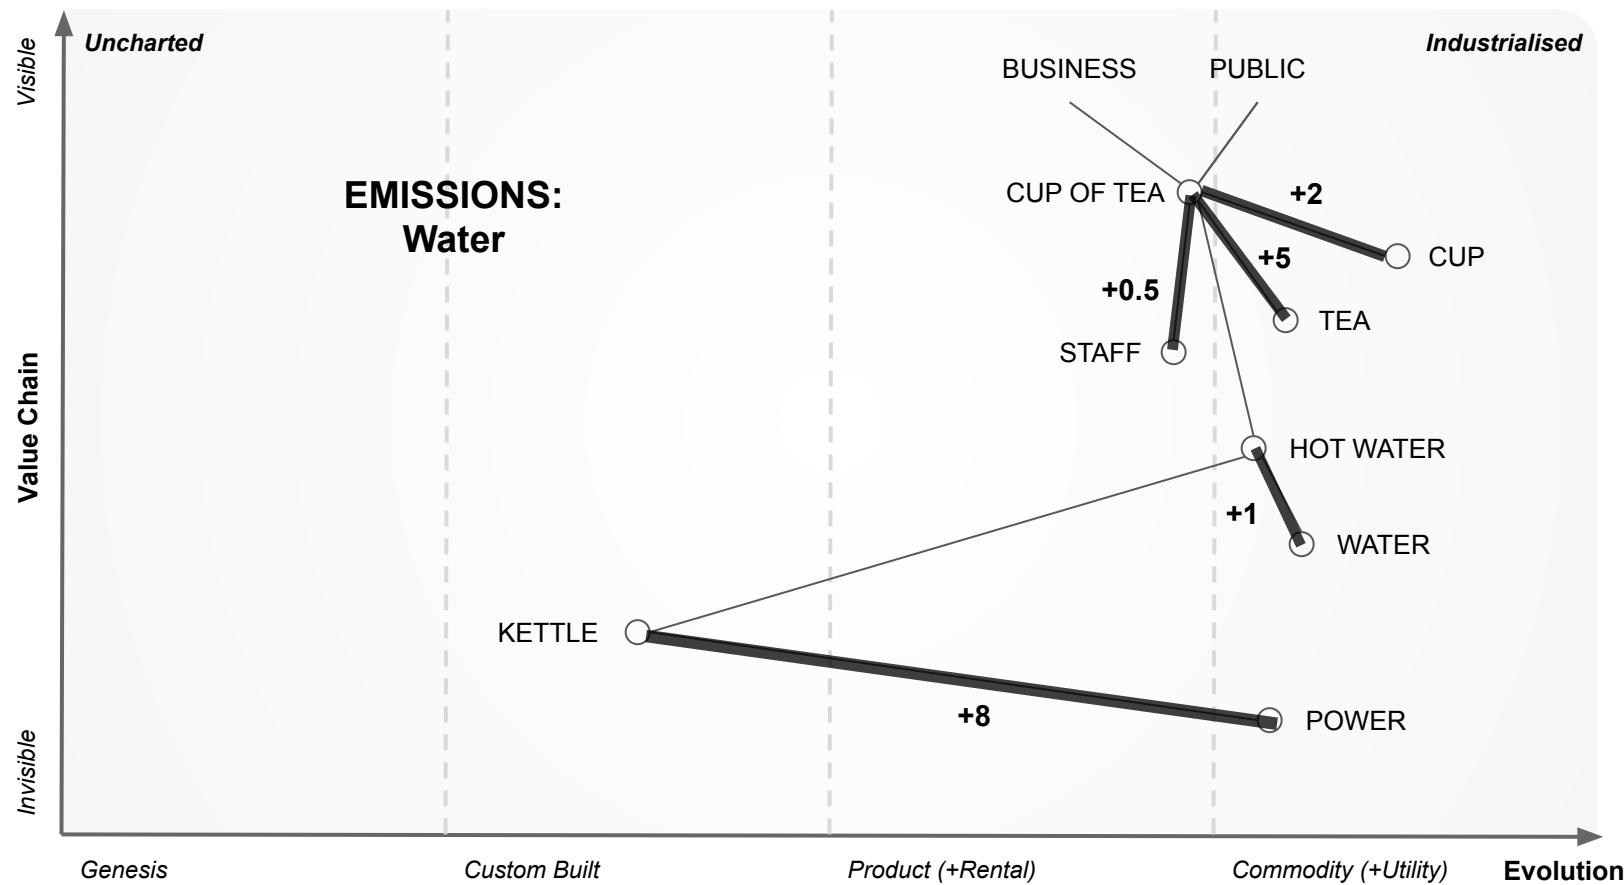

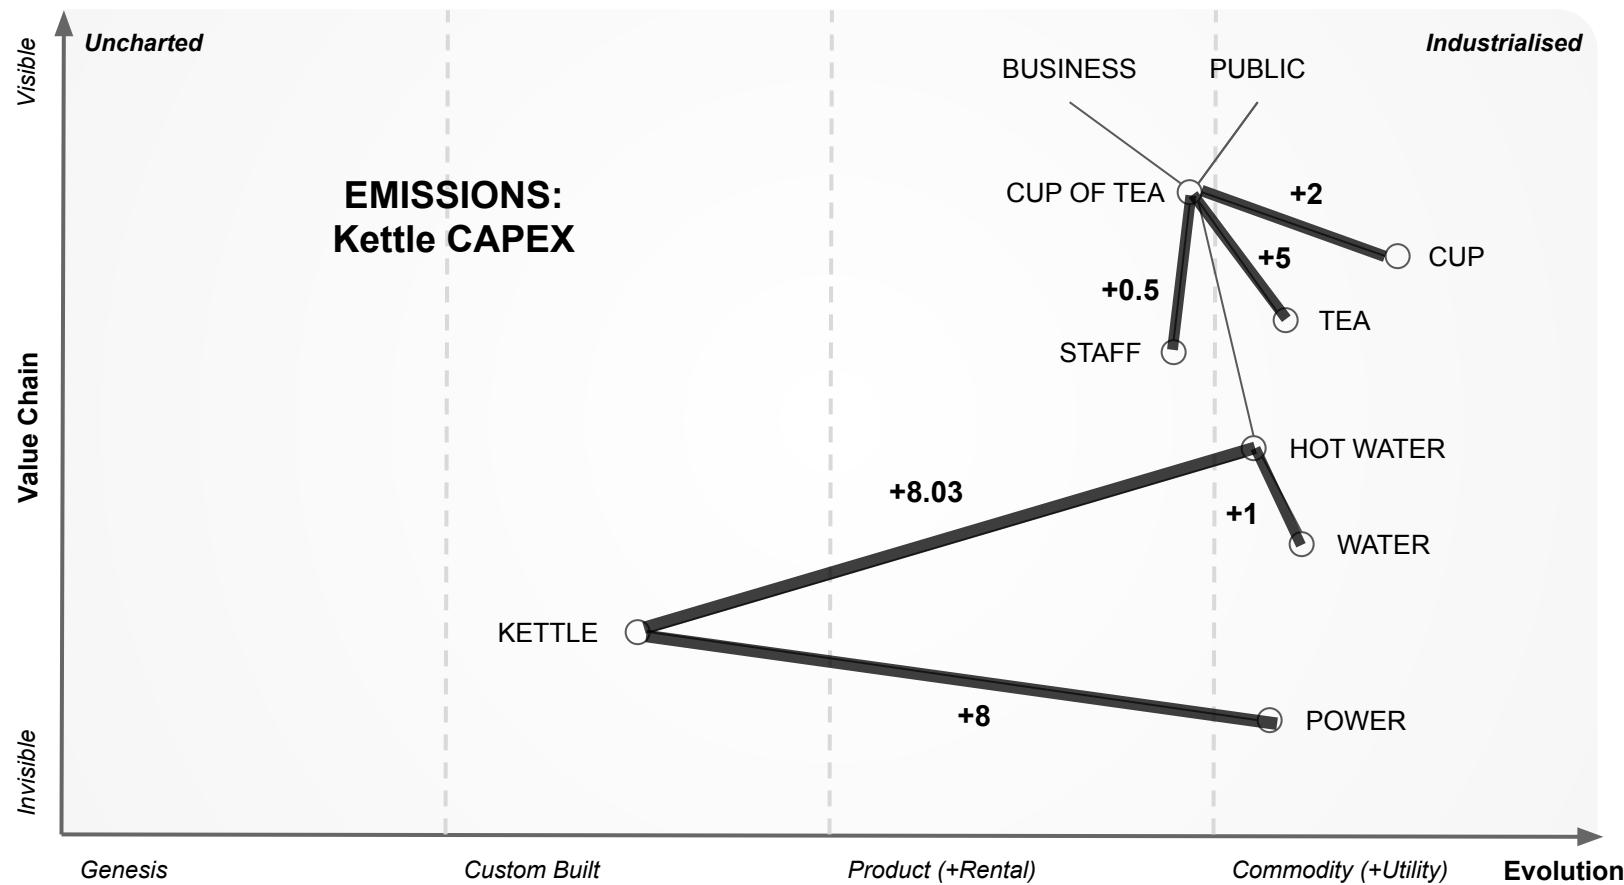

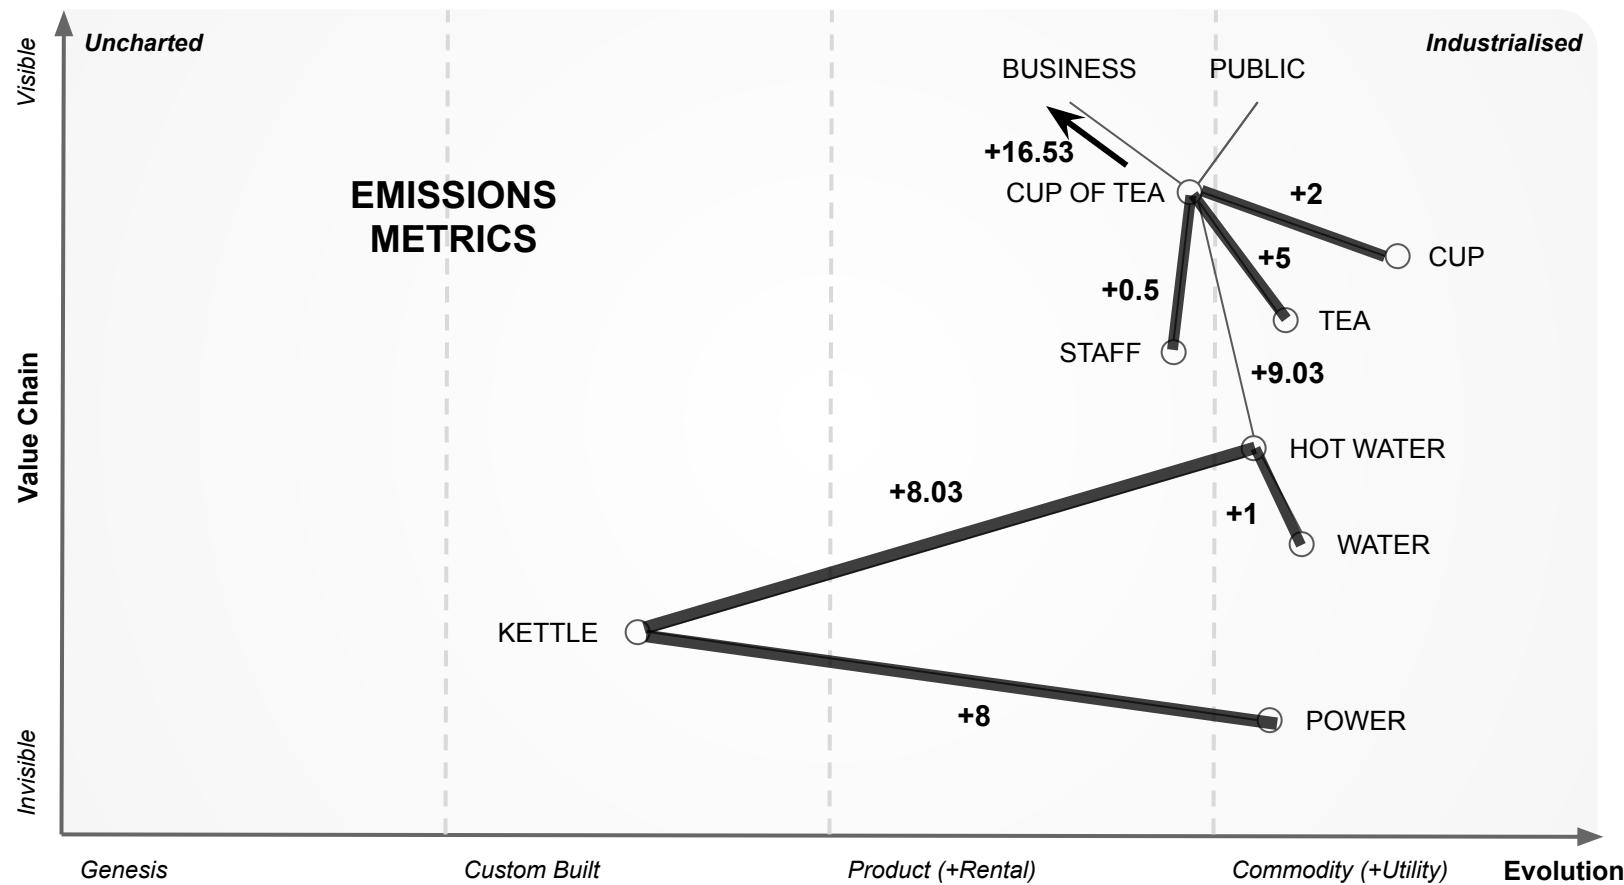

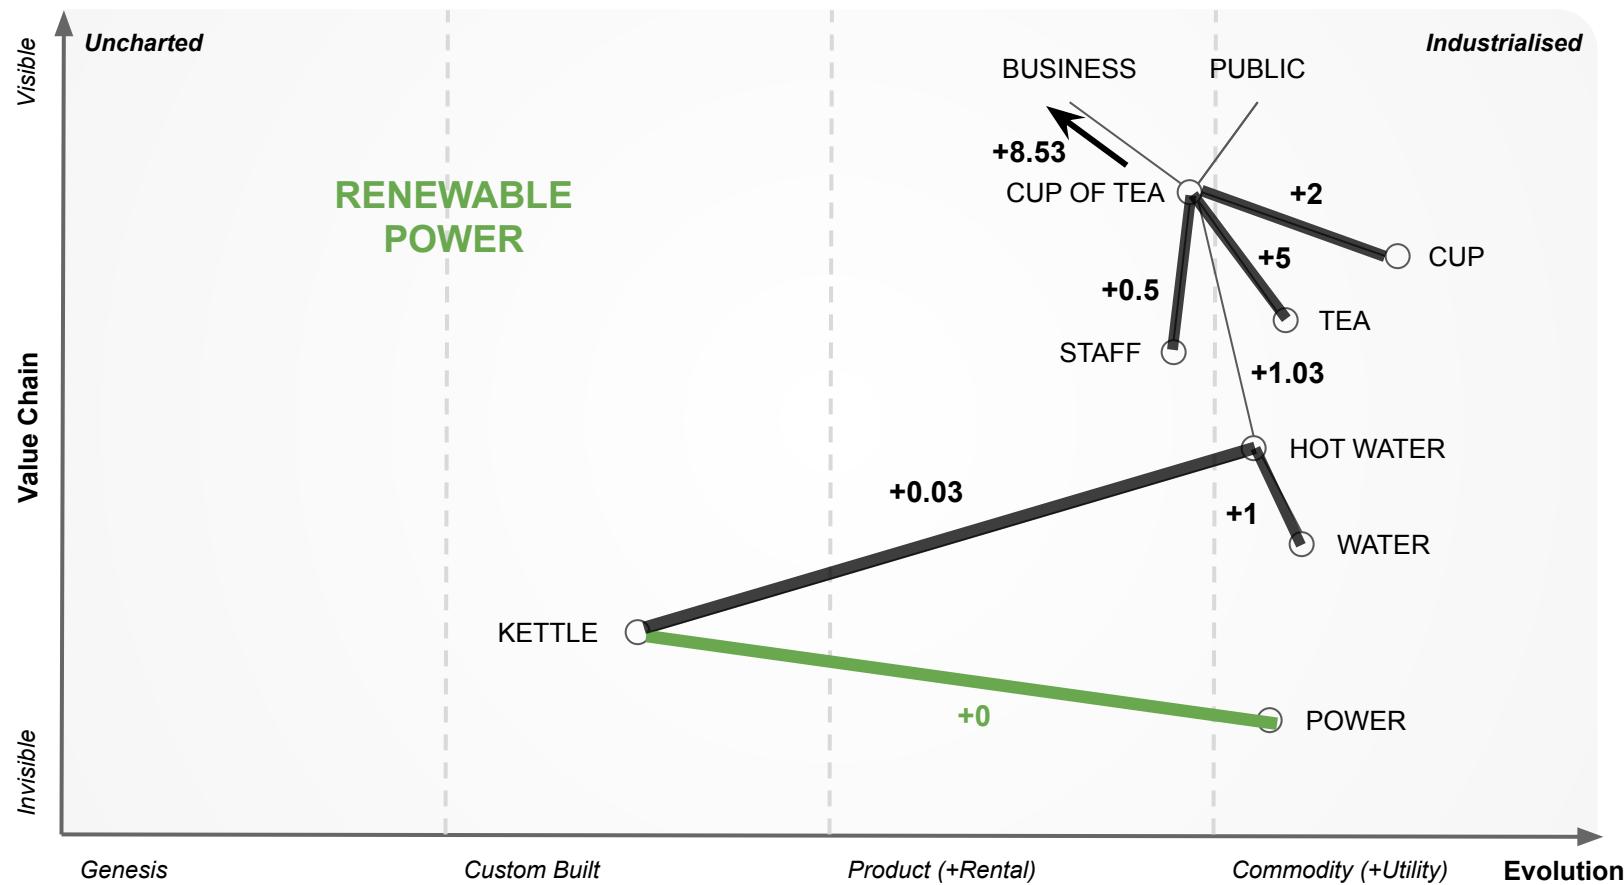

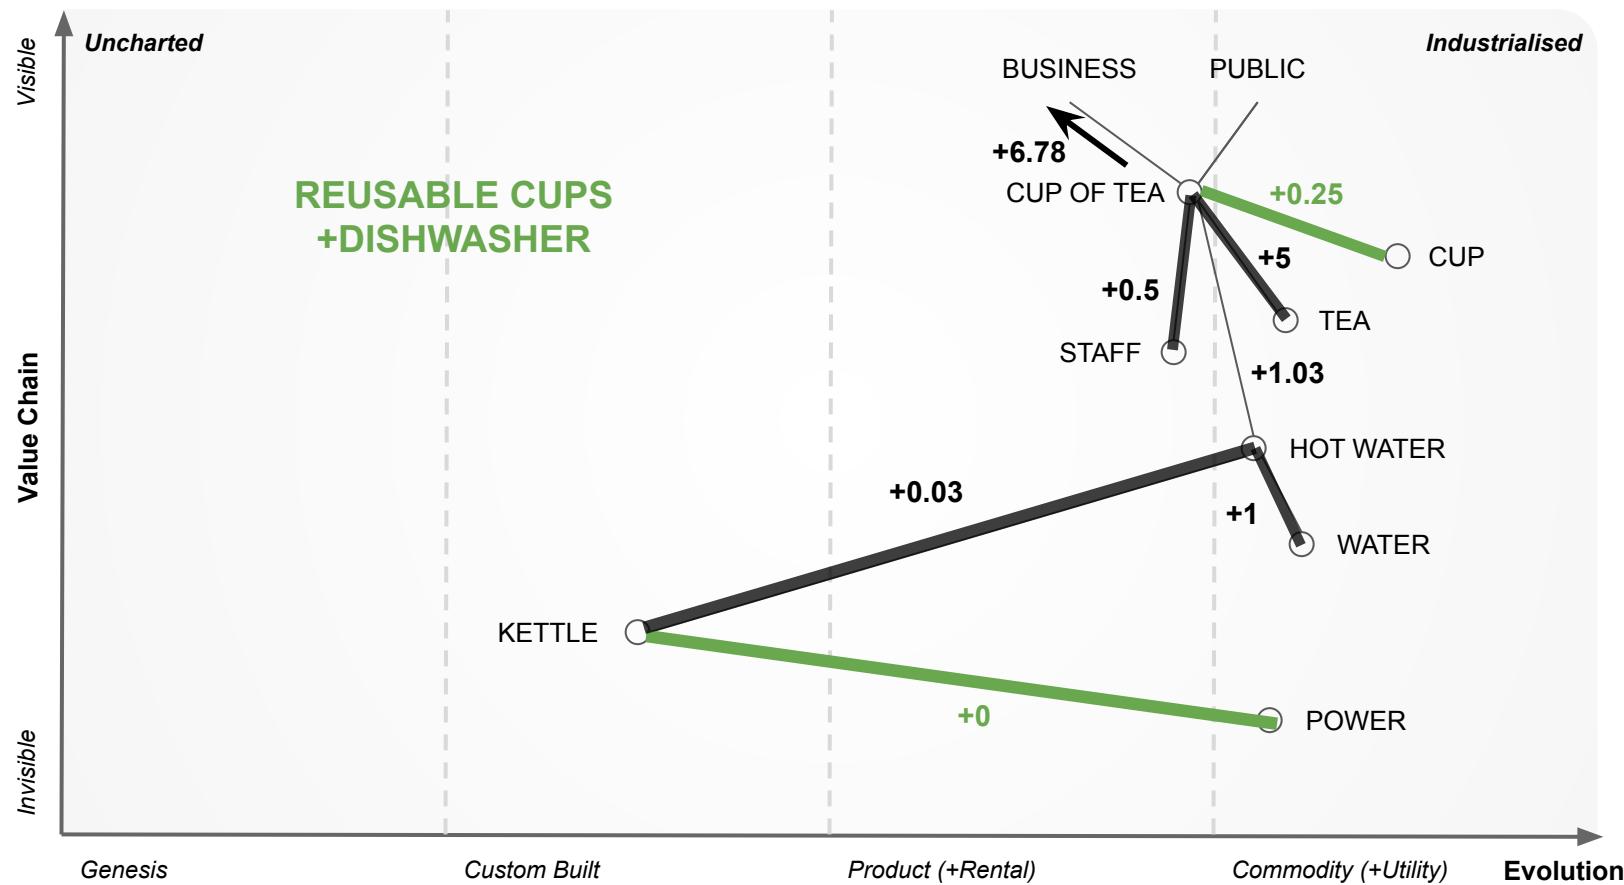

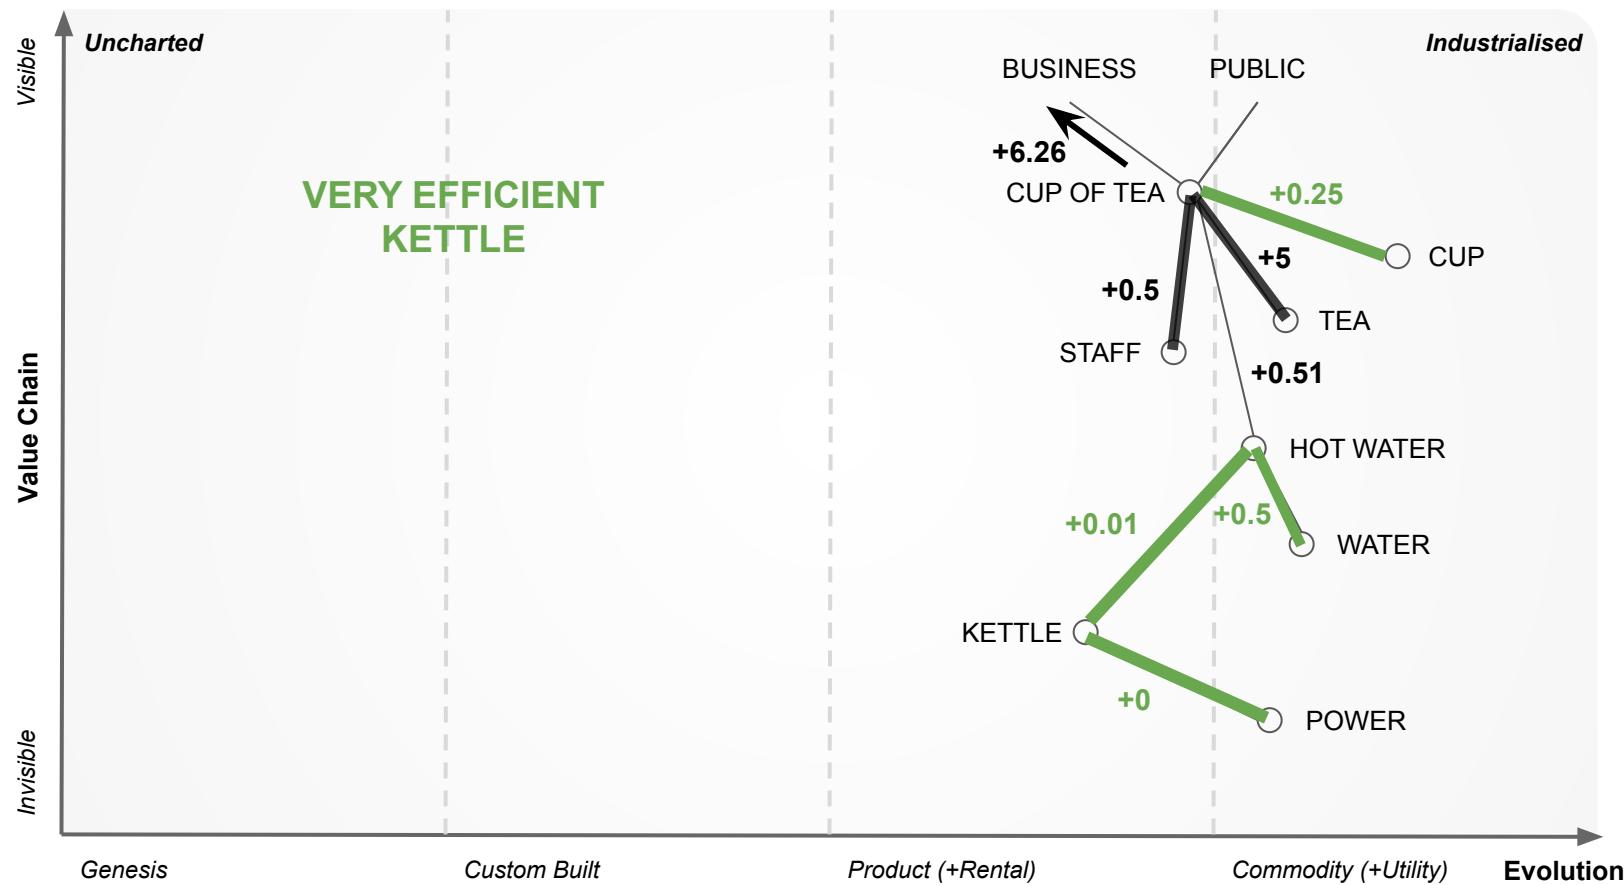

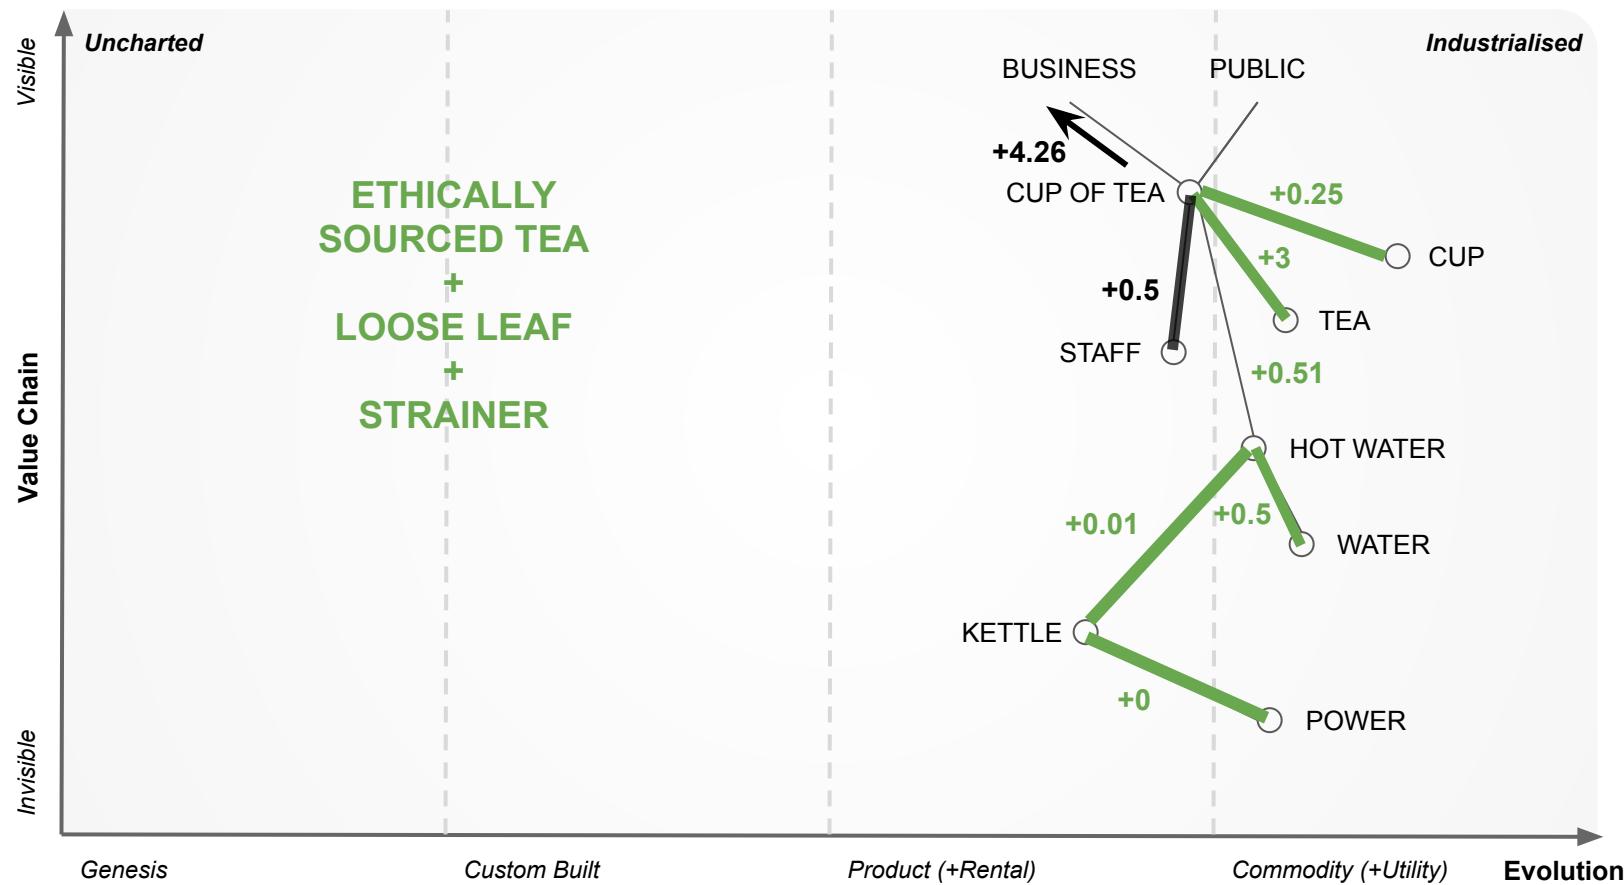

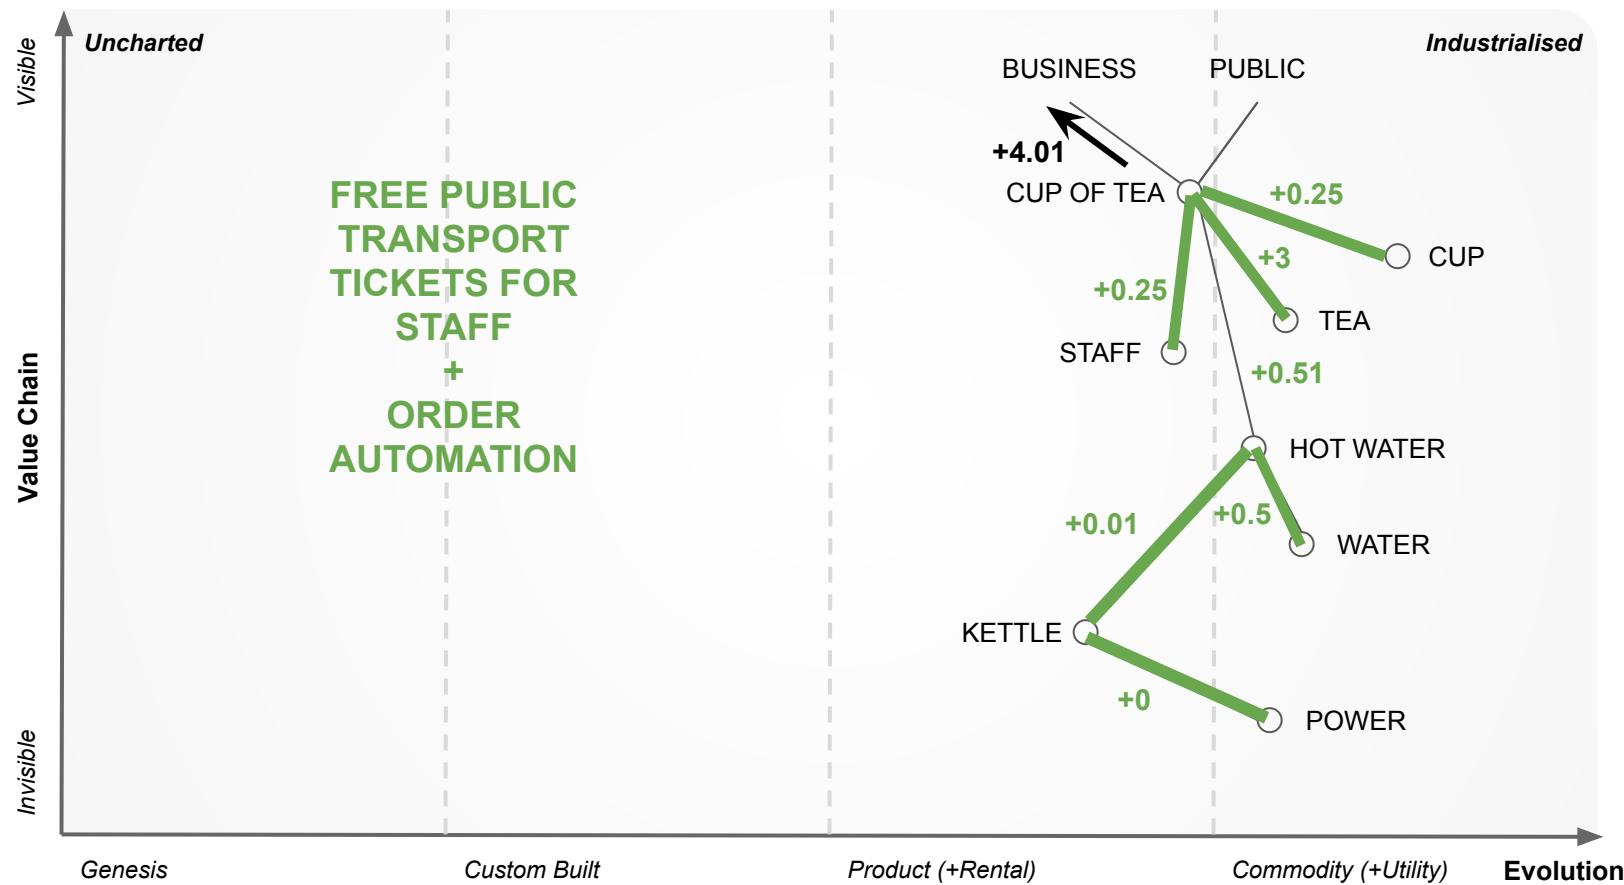

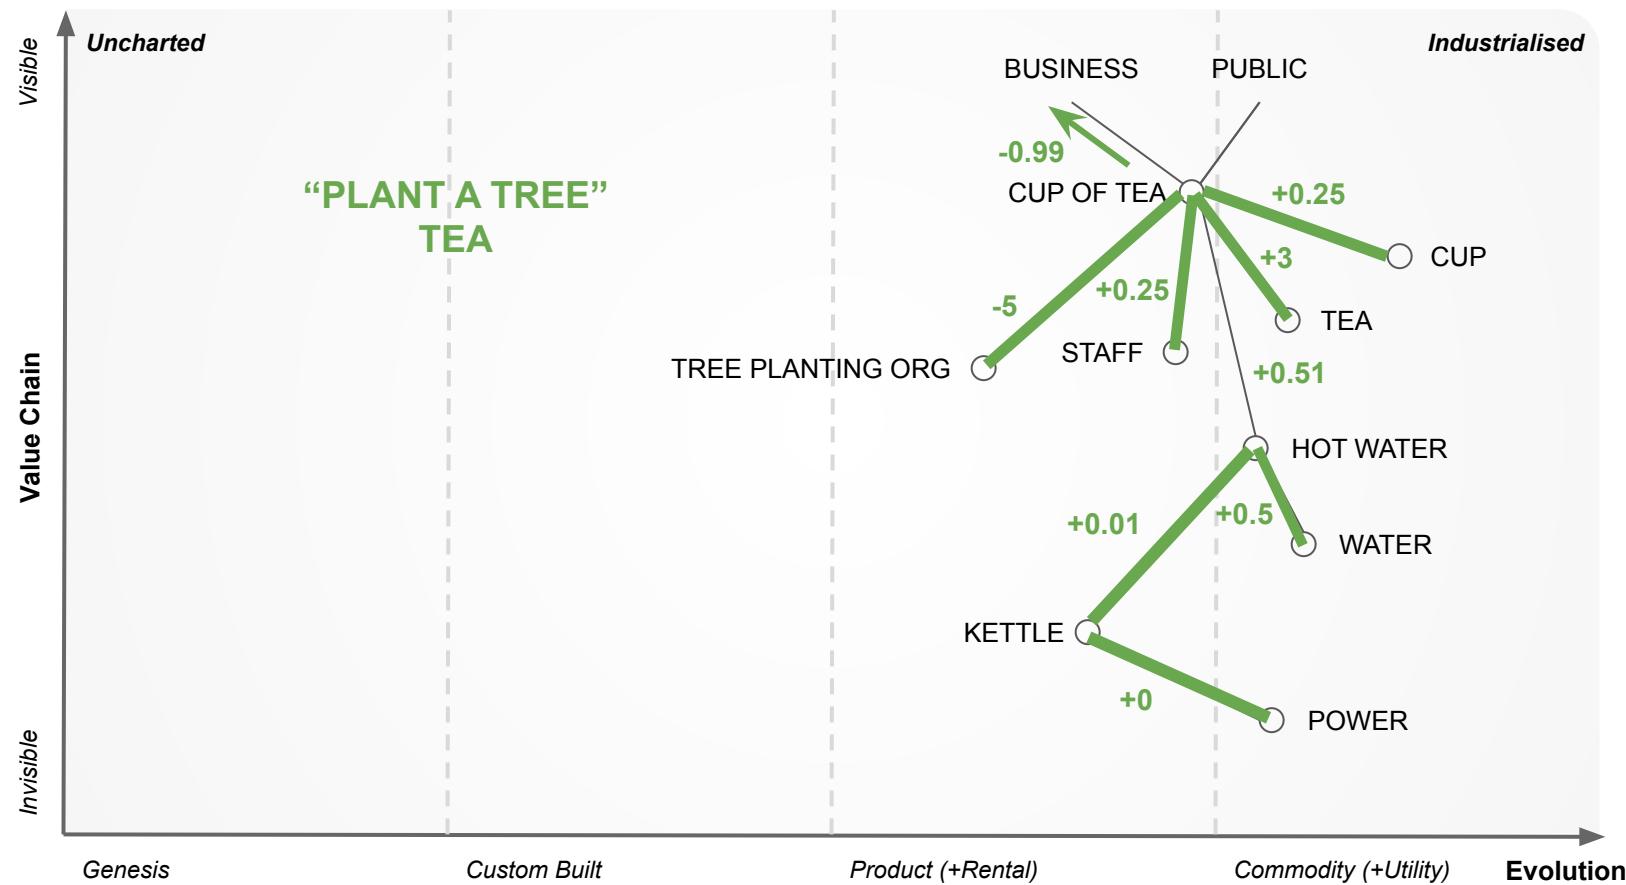

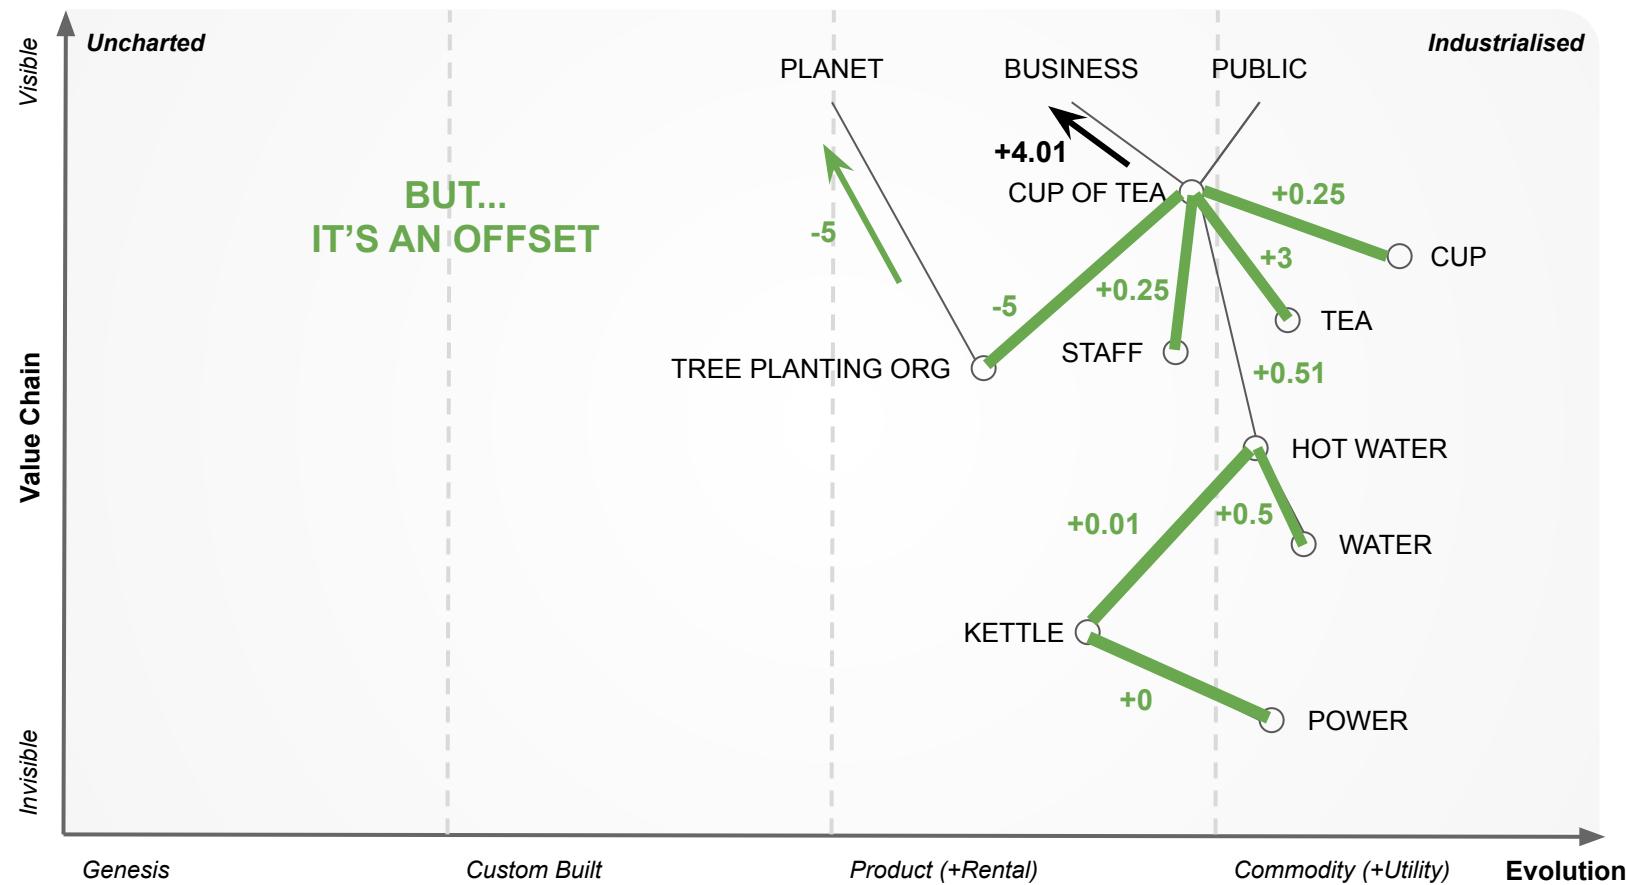

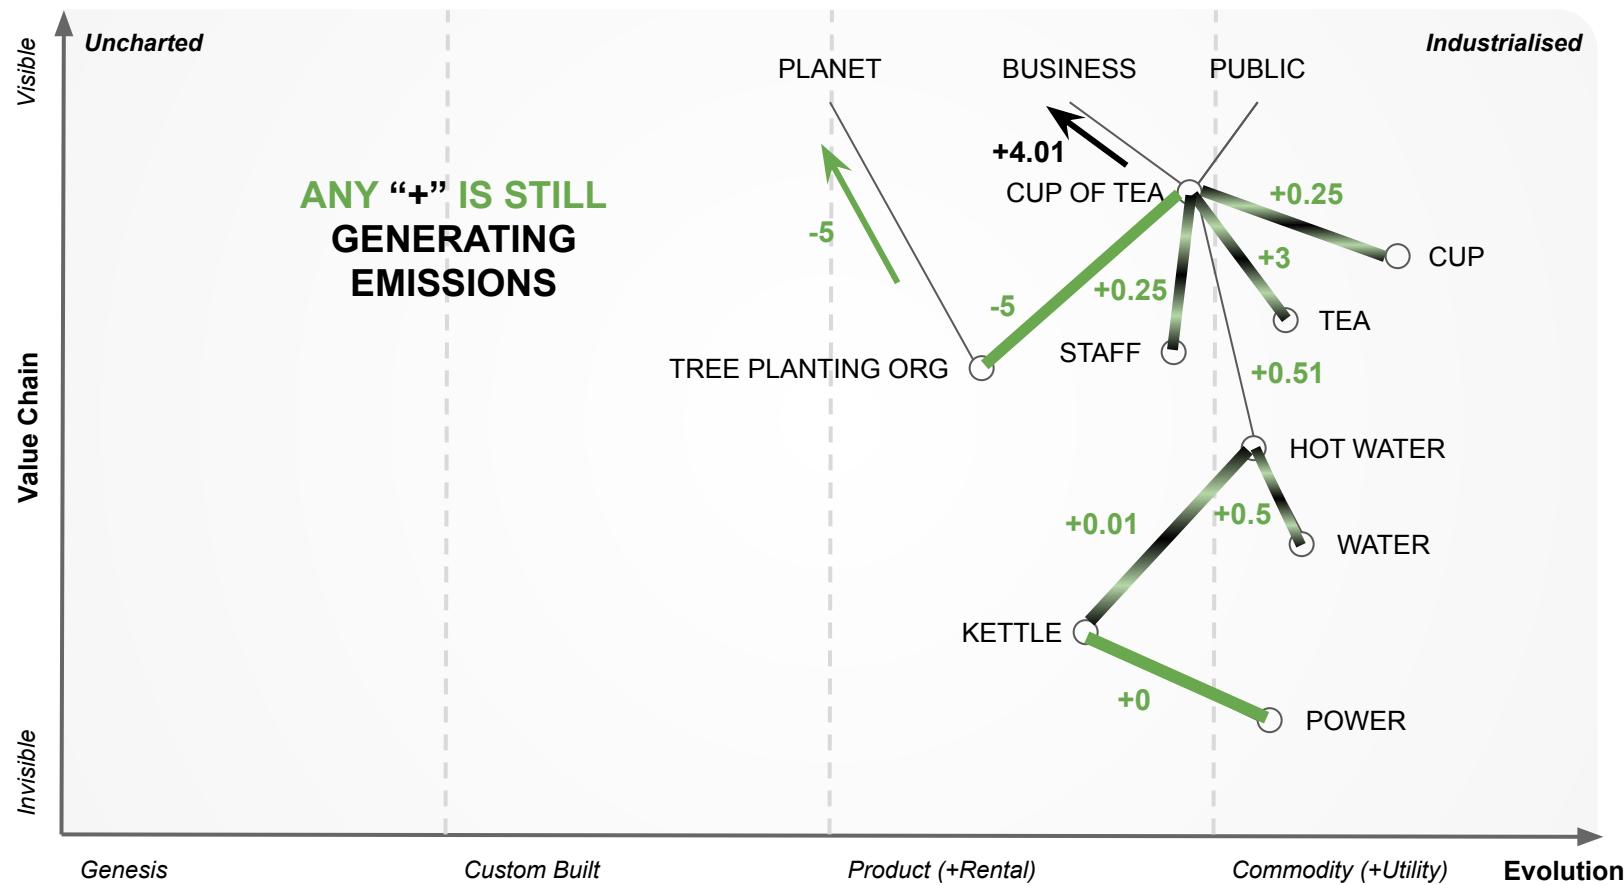

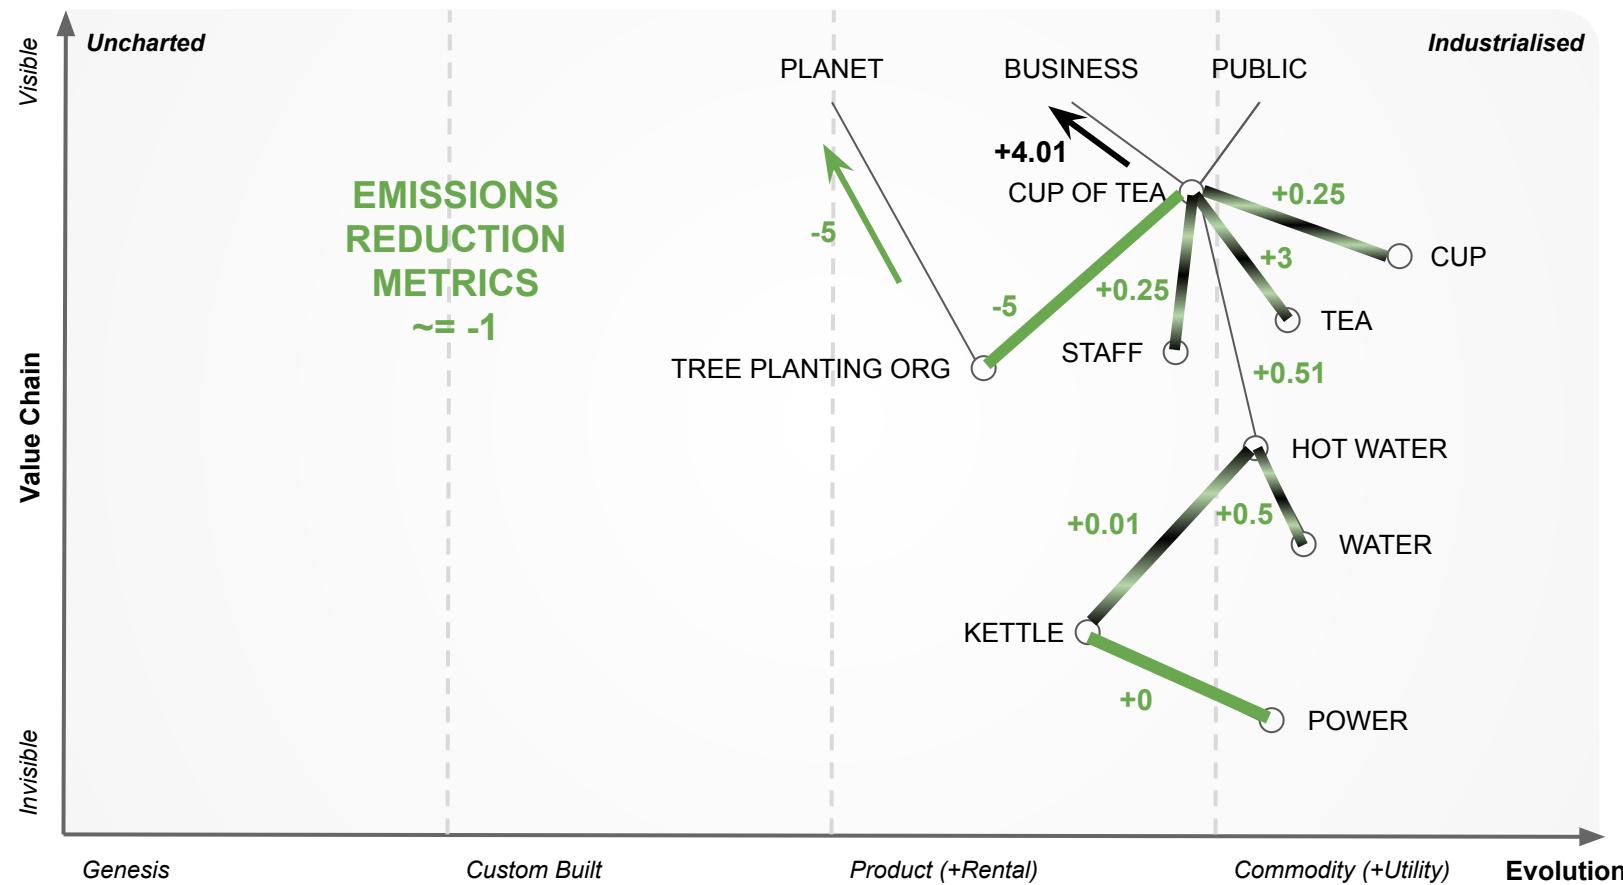

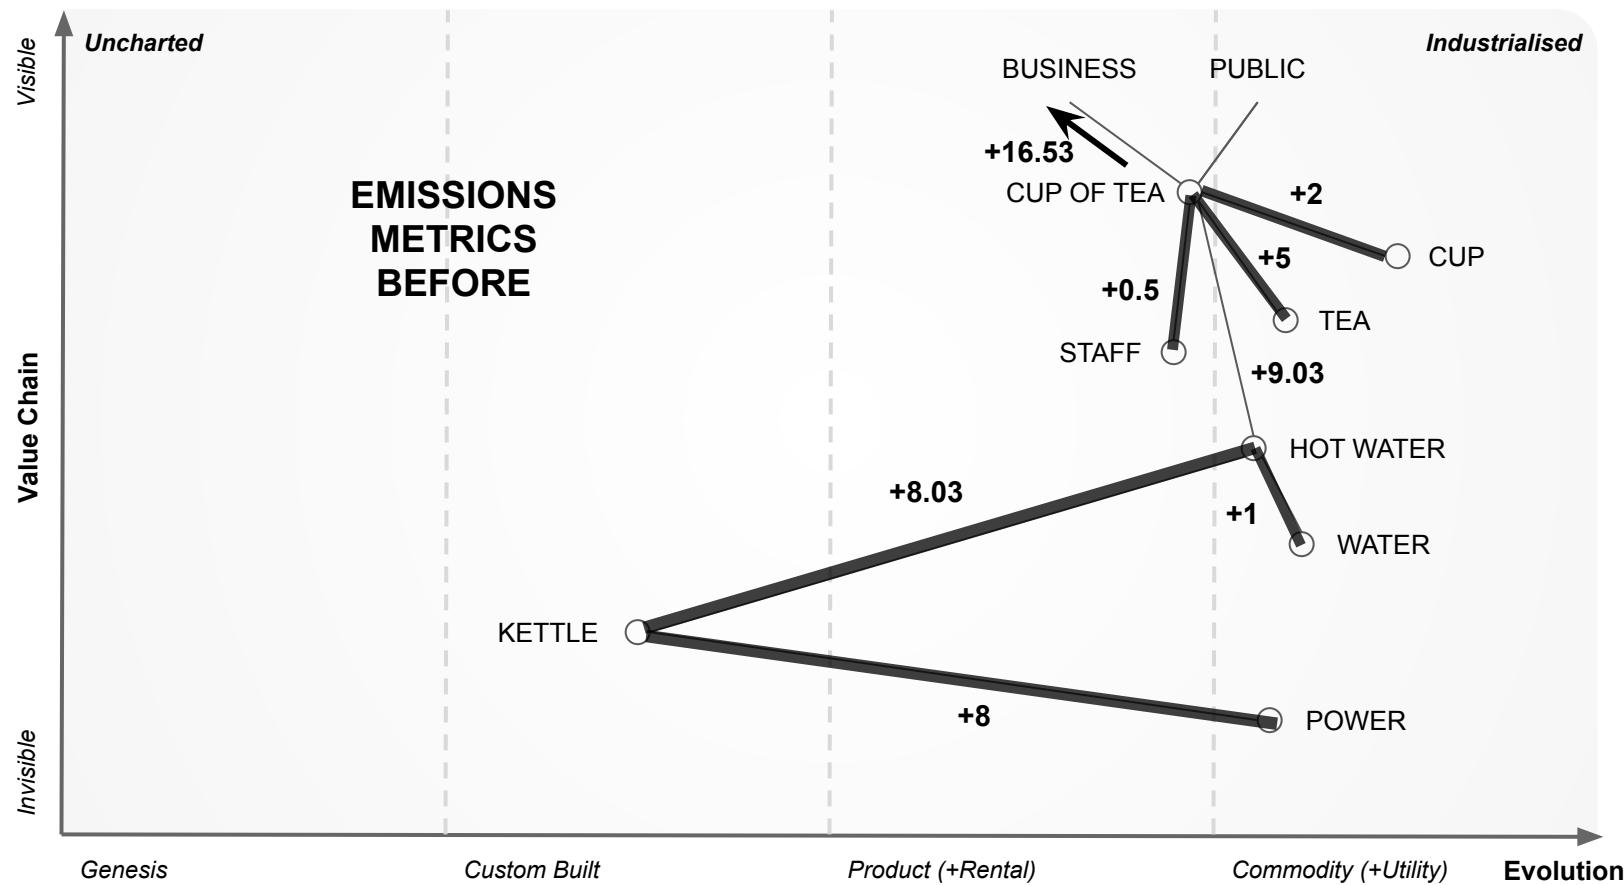

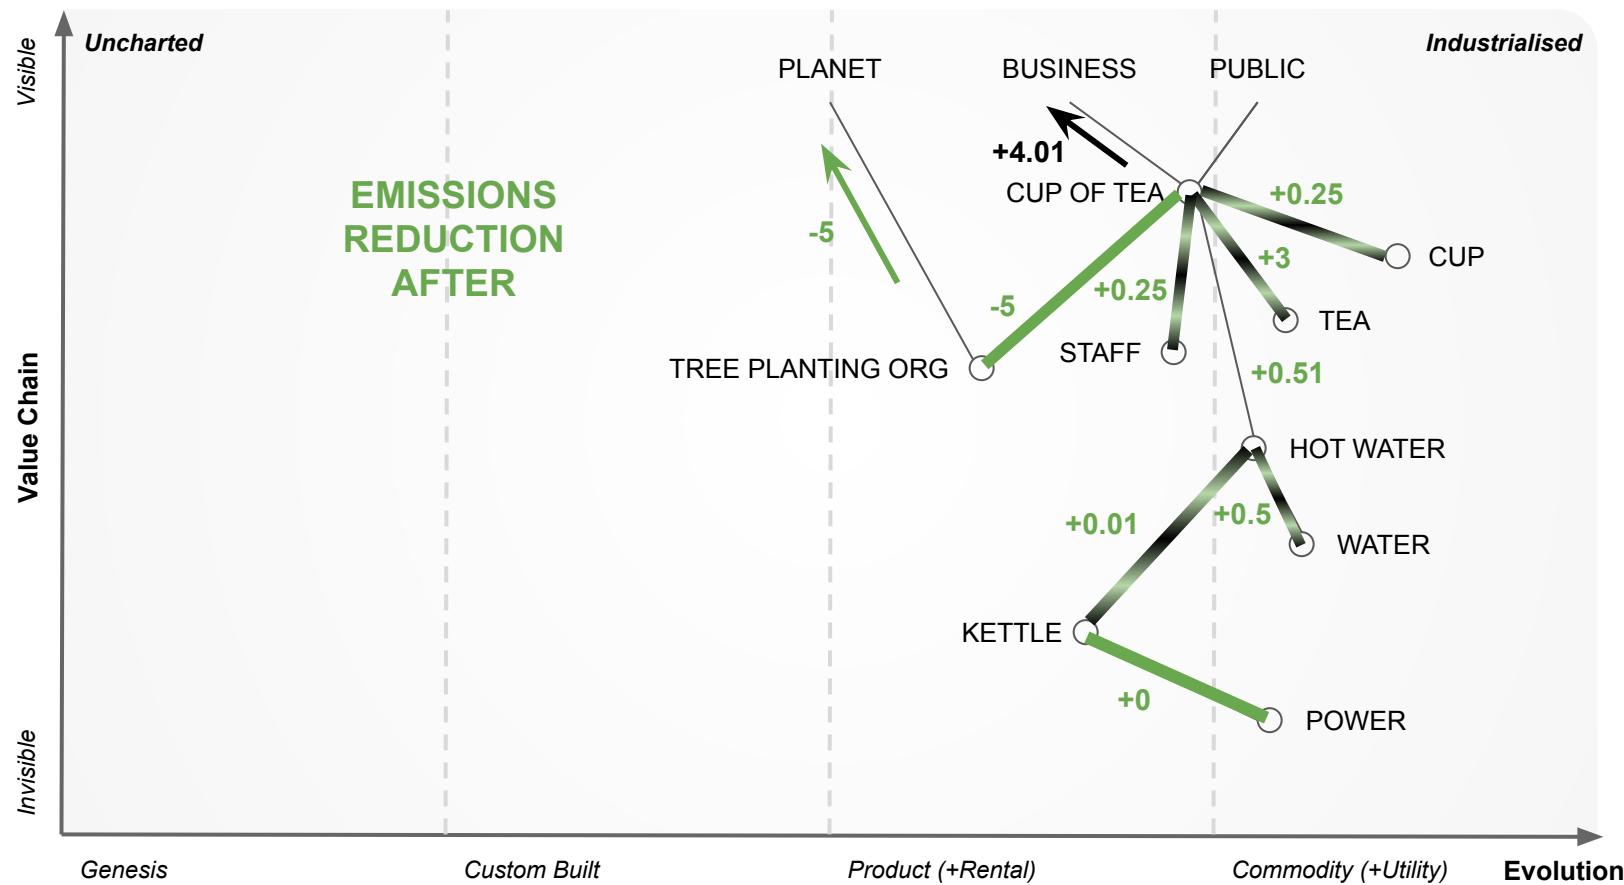

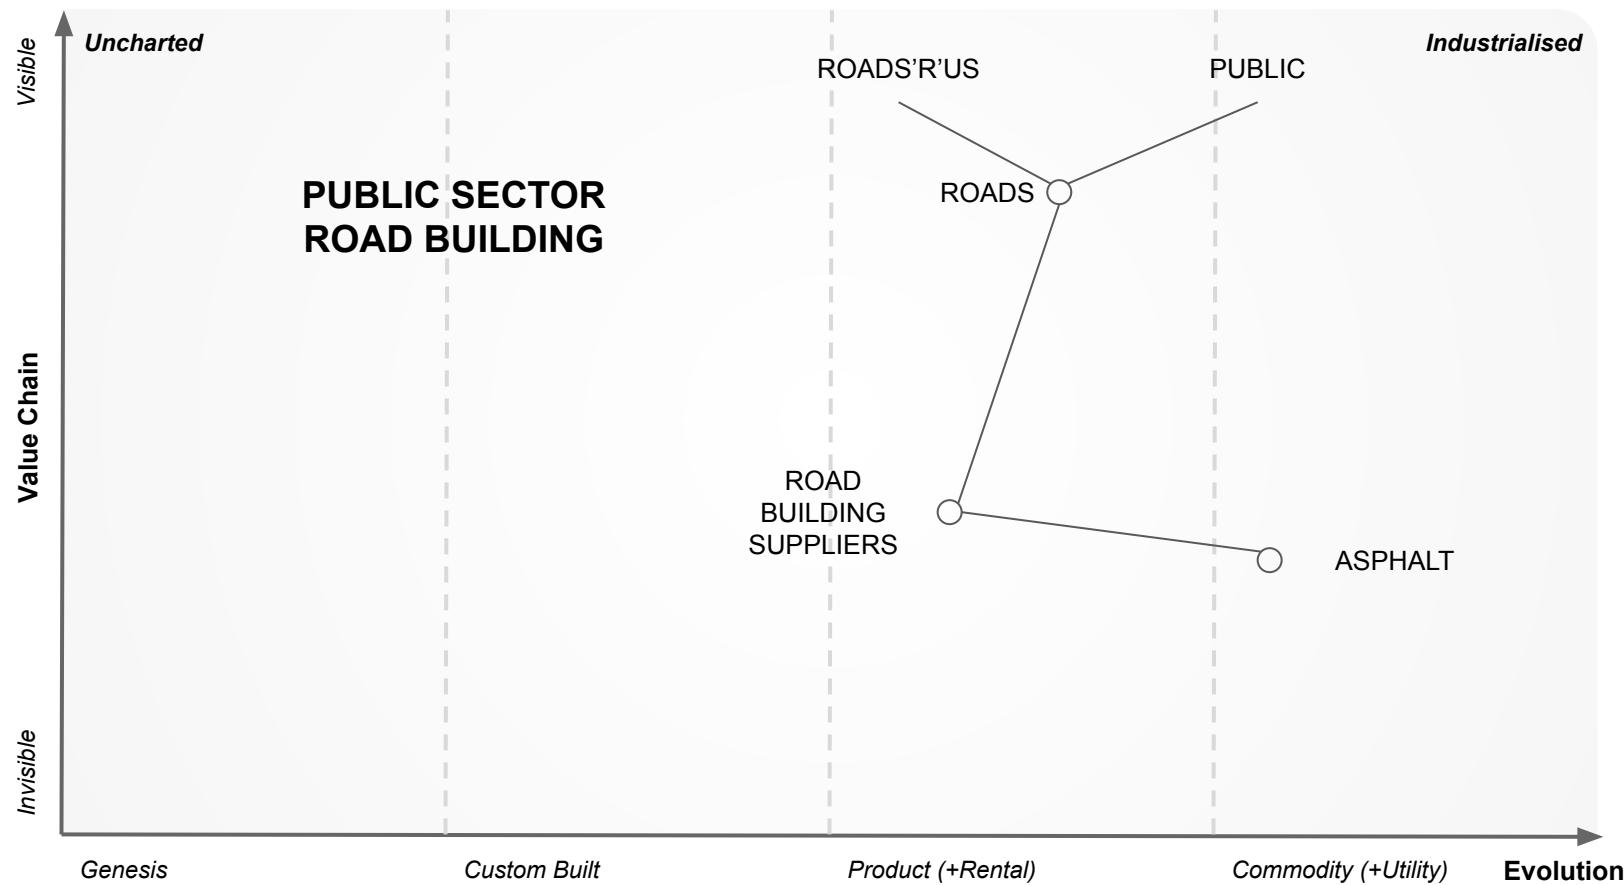

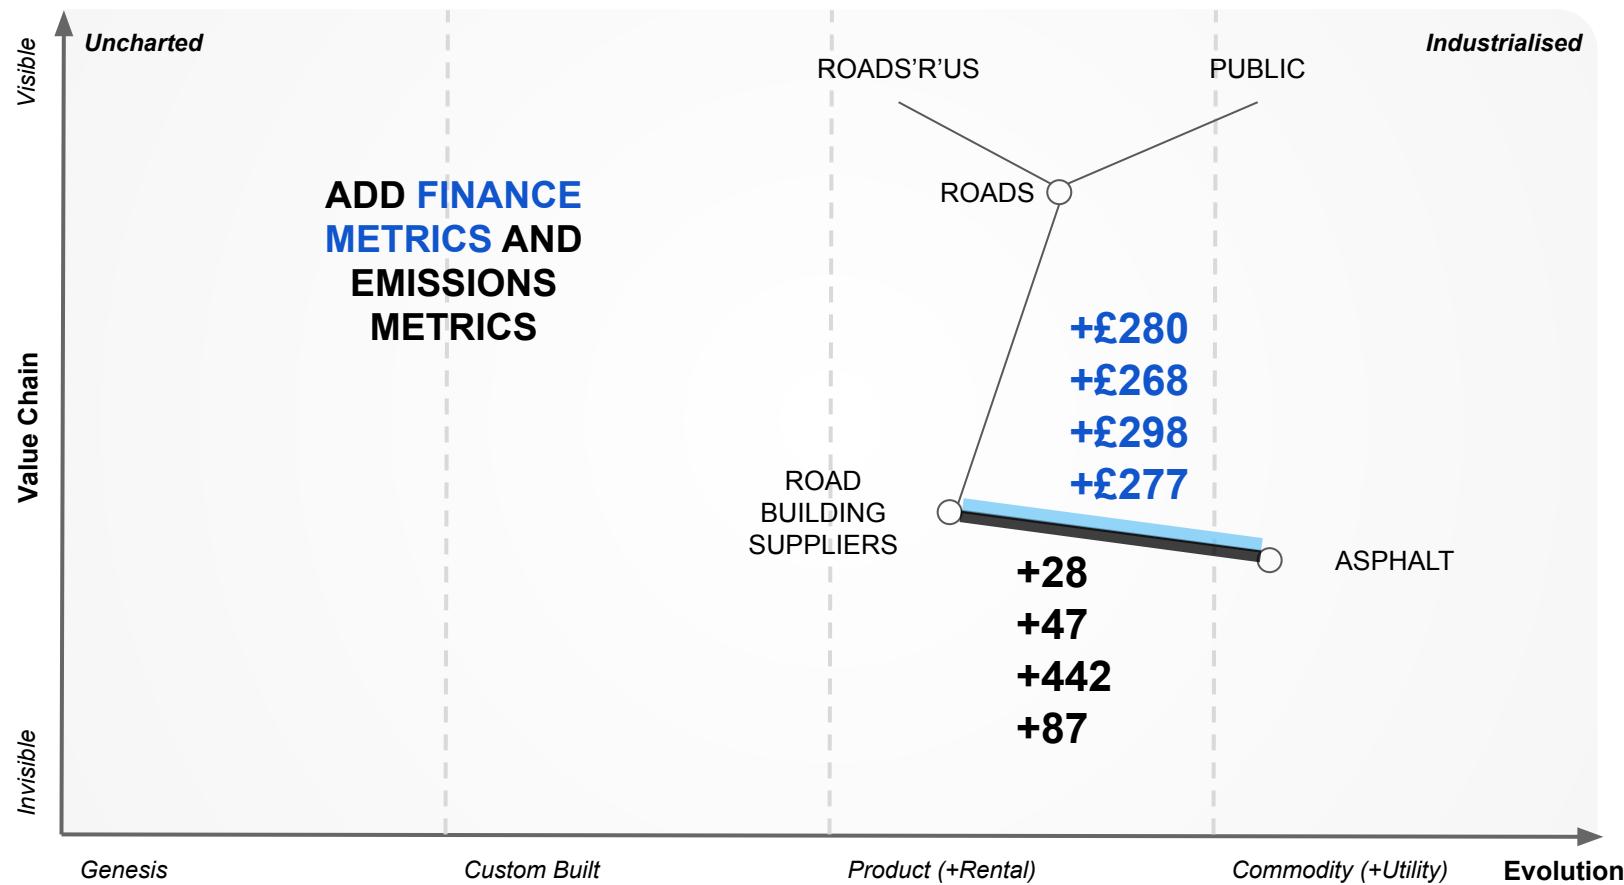

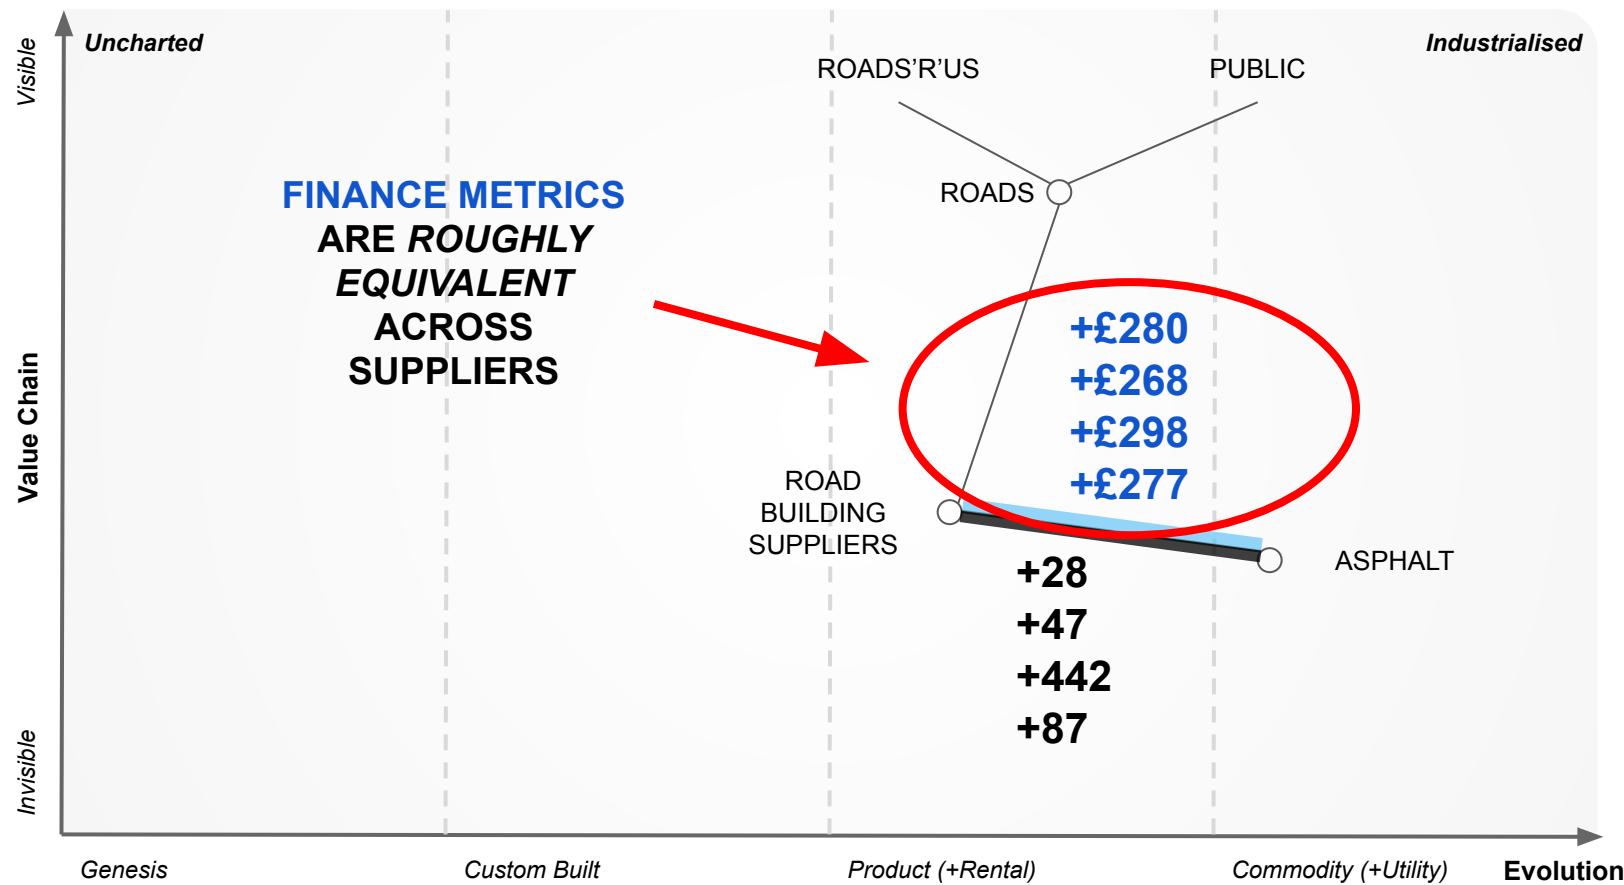

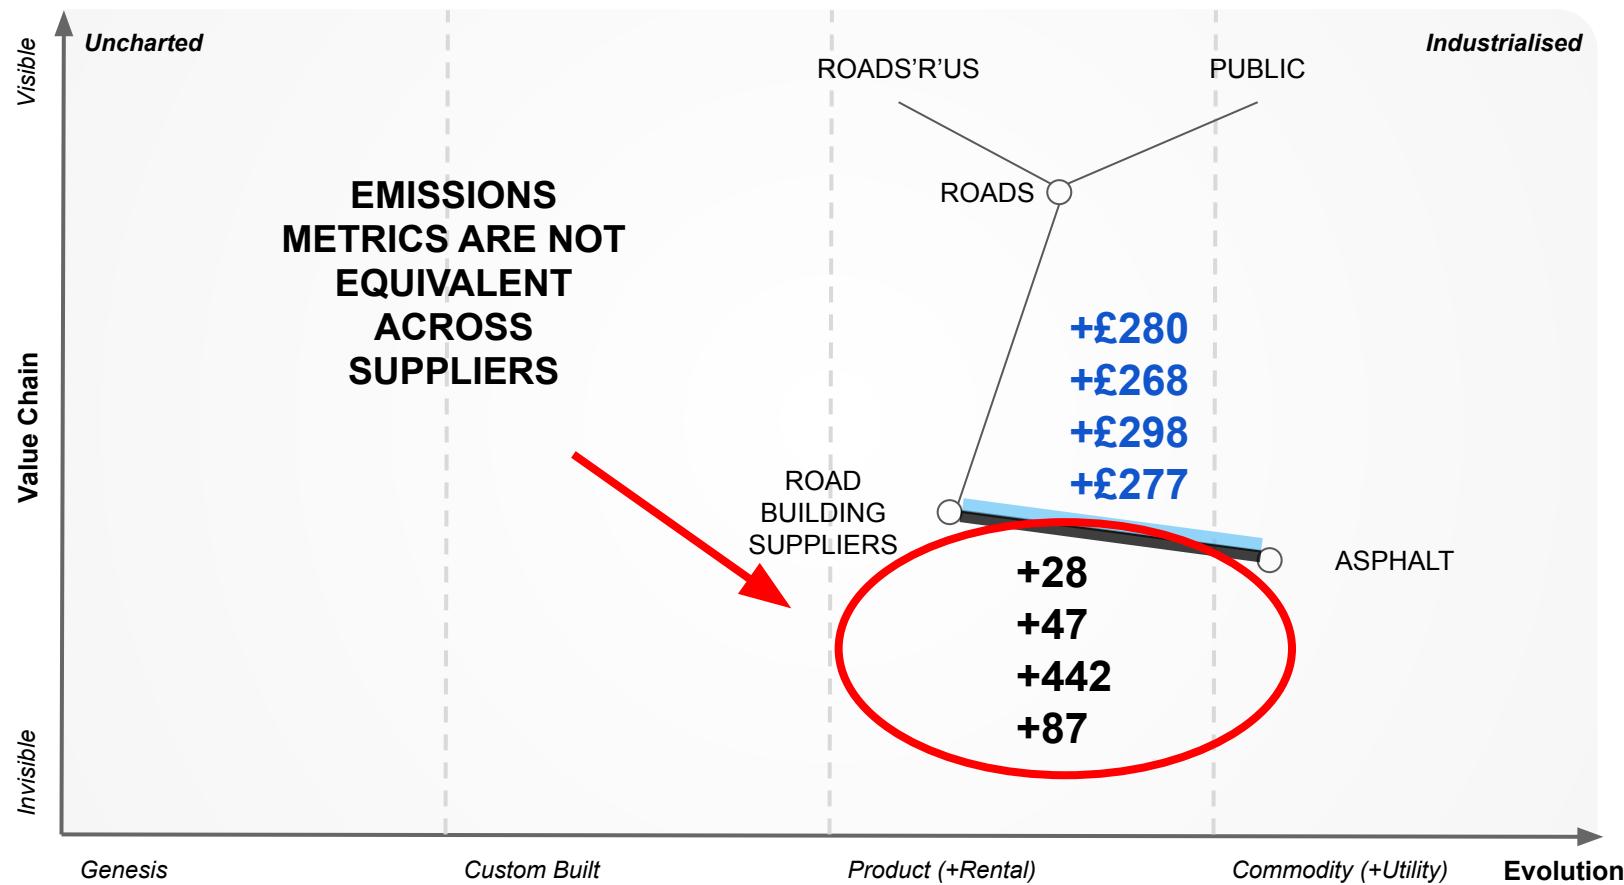

What about the real world?

(It's not all "cups of tea" is it!)

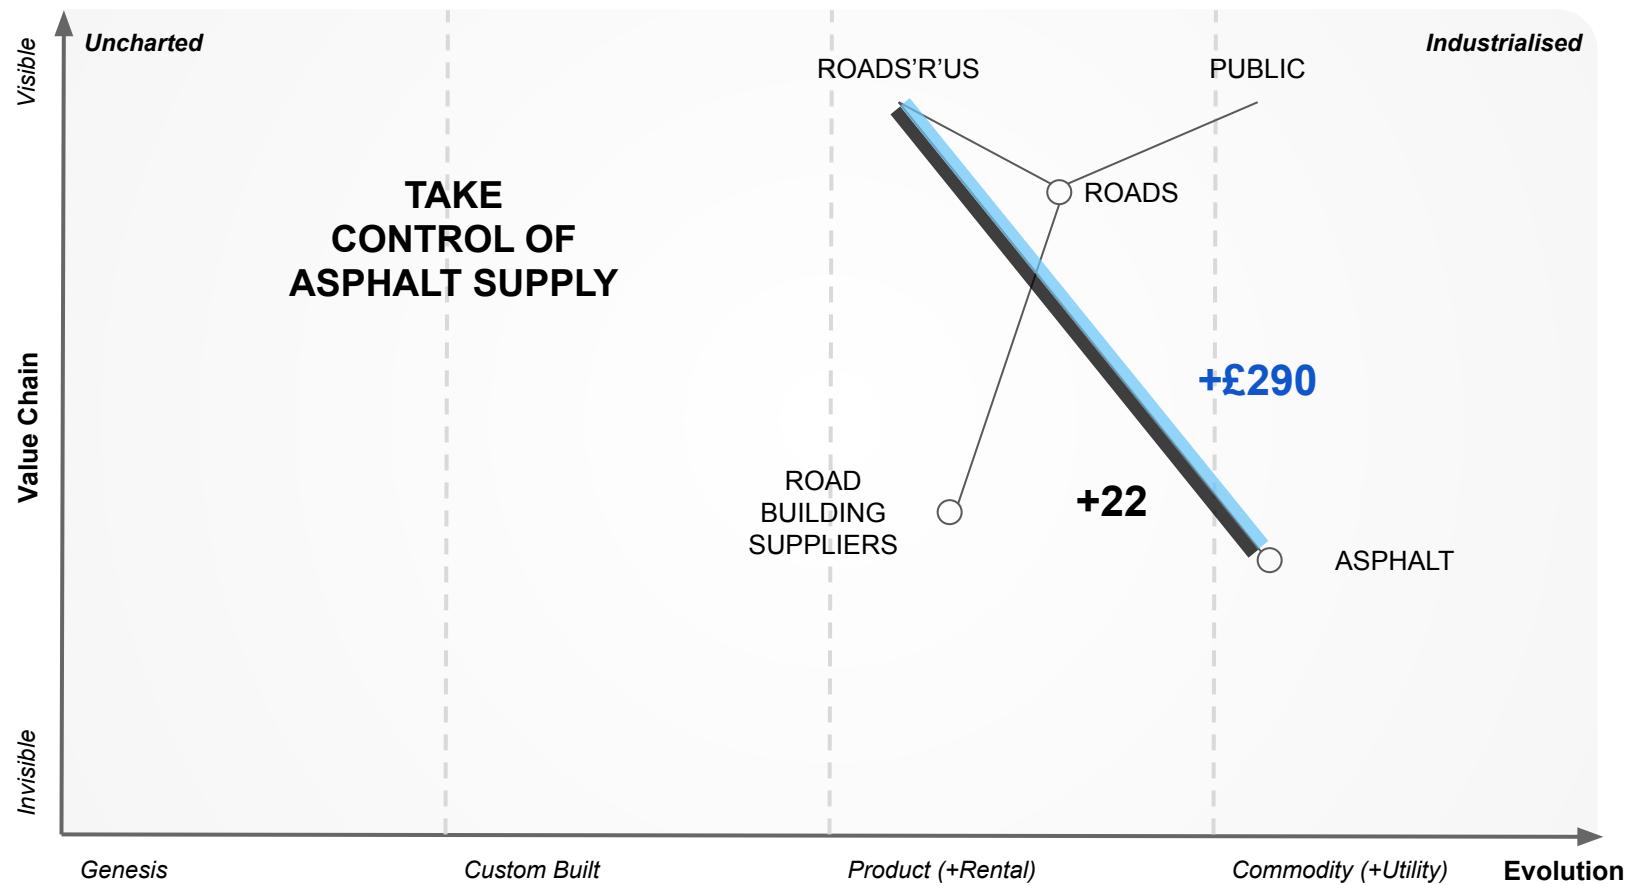

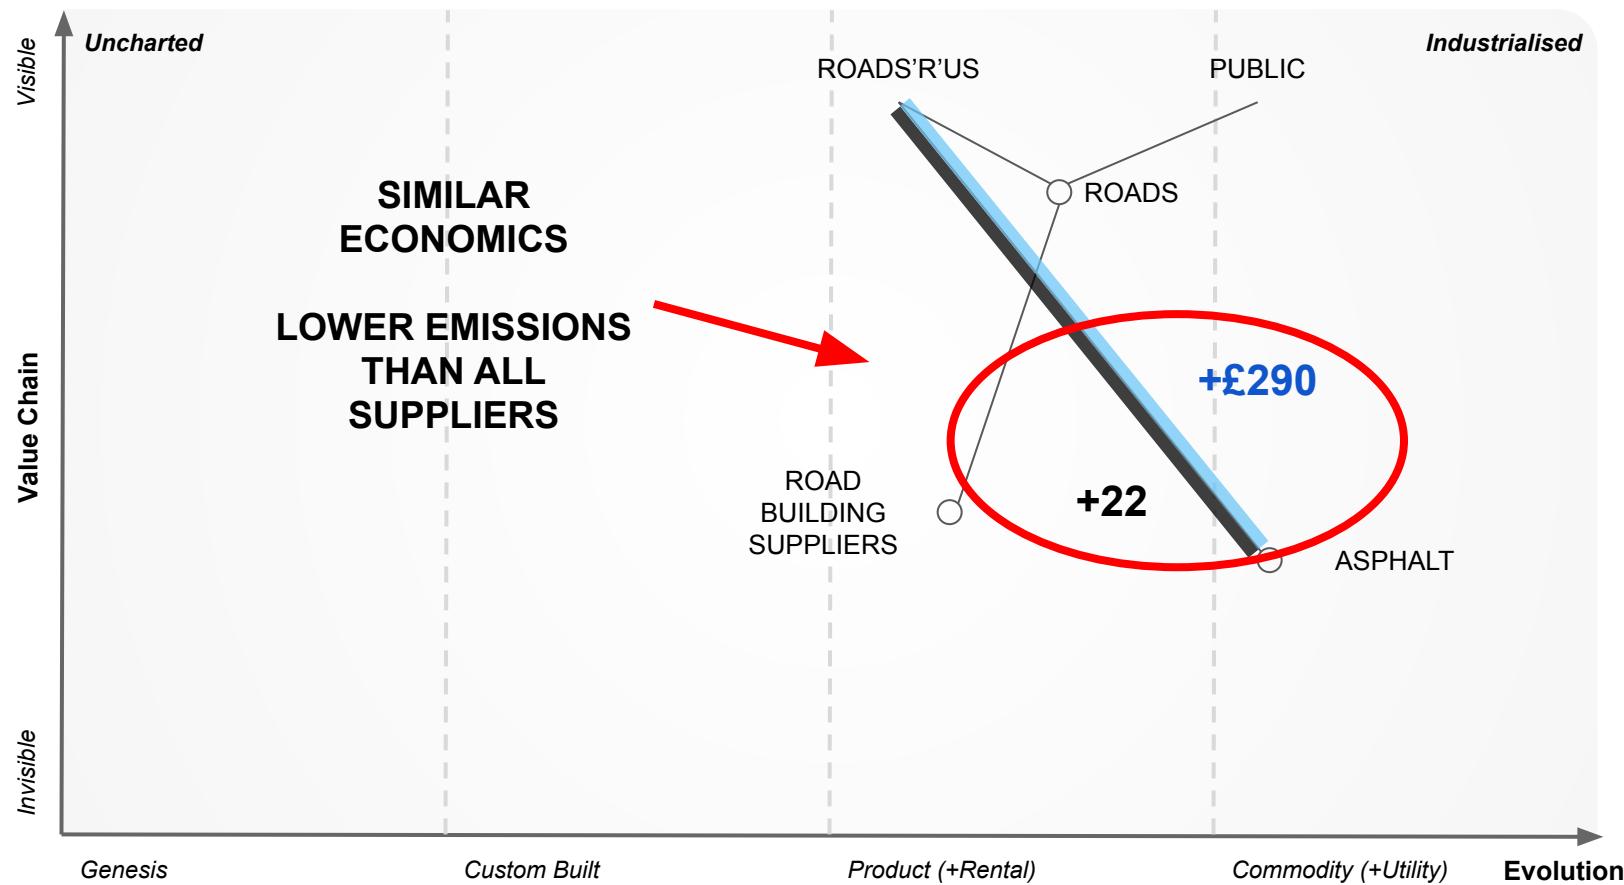

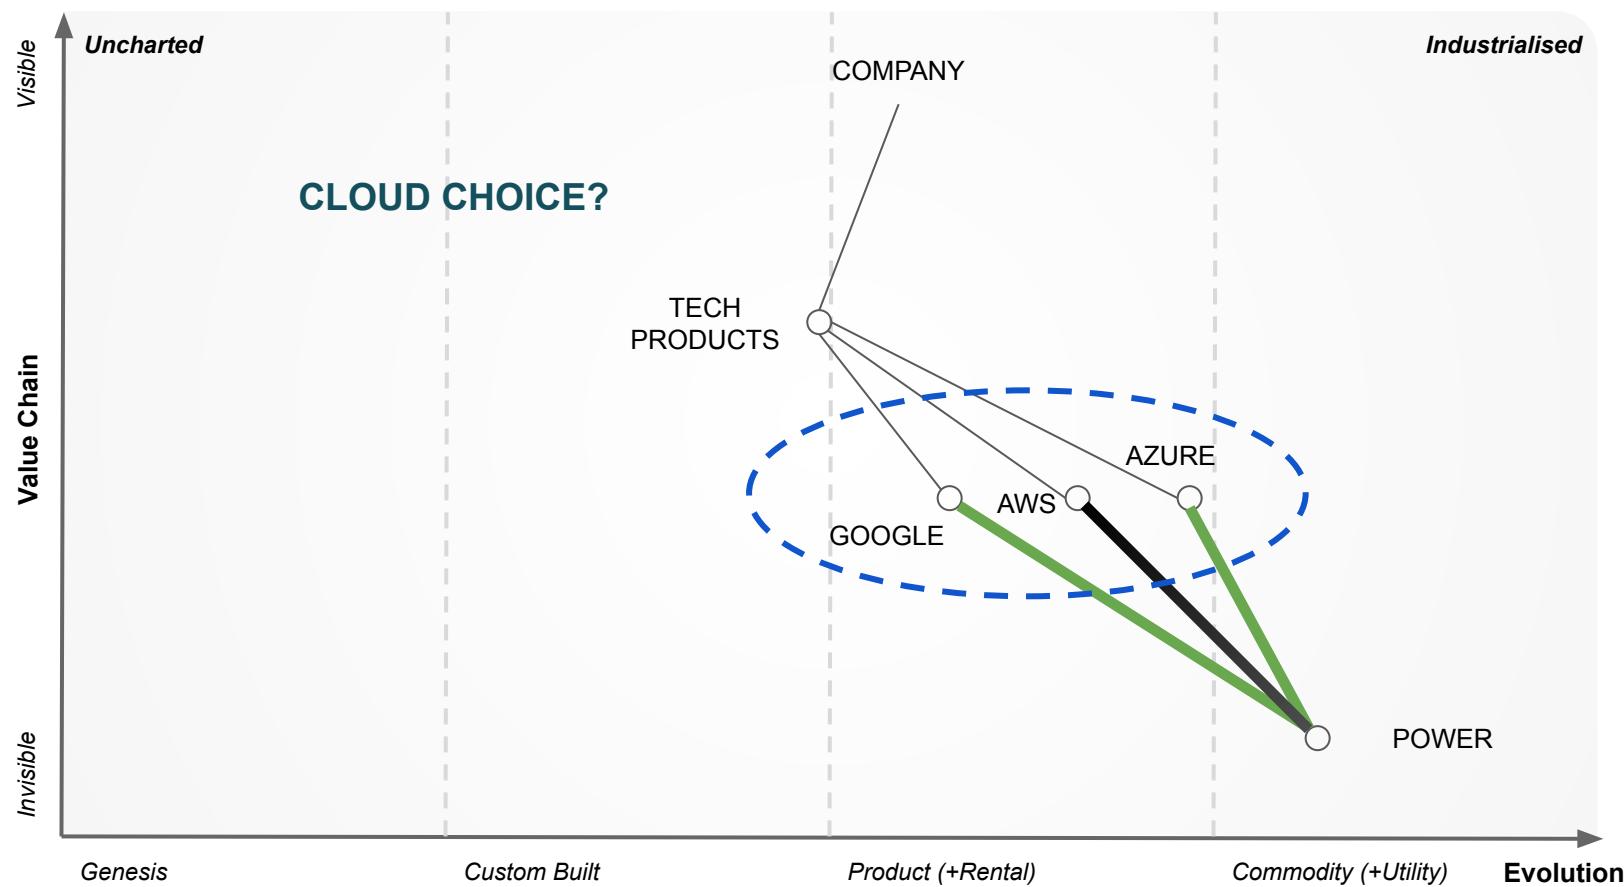

Change the landscape...?

What about choosing a cloud provider?

(if all compute was equal... which it isn't in cloud... see "serverless")

Maps are useful for identifying and
mitigating emissions

Downside: hard to report on your own
and your supply chain emissions
(those numbers are not real!)

Maps may be useful for identifying other externalities too!

Ignoring the Climate Crisis isn't an option...

Companies and industries that are not moving towards zero-carbon

Climate Change is changing our world:

The new normal

Mapping gives
you tools to see
the changing
landscape and
the externalities

Mapping can
help us make
better decisions
around Climate
Change
